The Expression of the Emotions in Man and Animals Charles Darwin, 1948-01-01

The Expression of the Emotions in Man and Animals (Evolutionary Theory) Charles Darwin, 2021-05-07 The Expression of the Emotions in Man and Animals is Charles Darwin's major work of evolutionary theory. The book concerns the biological aspects of emotional life, and Darwin explores the animal origins of such human characteristics as the lifting of the eyebrows in moments of surprise and the mental confusion which typically accompanies blushing. Darwin's biological approach links emotions to their origins in animal behavior, and allows cultural factors only an auxiliary role in the shaping of expression. This biological emphasis leads to a concentration on six emotional states: happiness, sadness, fear, anger, surprise and disgust. It also leads to an appreciation of the universal nature of expression, with its implication of a single origin for the entire human species; and Darwin points to the importance of emotional communication with children in their psychological development.

The Expression of Emotion in Man and Animals (Annotated) Charles Darwin, 2020-03-31 Differentiated book- It has a historical context with research of the time-The expression of emotions in man and animals is the third great work of evolutionary theory by Charles Darwin, following *The Origin of Species* (1859) and *The Descent of Man* (1871). Initially intended as a chapter in *The Descent of Man*, *The Expression* grew in length and was published separately in 1872. This book addresses the biological aspects of emotional life, and Darwin explores the animal origins of human characteristics such as raising the eyebrows moments of surprise and the mental confusion that usually accompanies the blush. A German translation of the expression appeared in 1872; The Dutch and French versions followed in 1873 and 1874. A second edition of the book, with only minor modifications, was published in 1890. Since its first publication, *The Expression* has never been sold out, but has also been described as Darwin's forgotten masterpiece. Before Darwin, human emotional life had posed problems to the western philosophical categories of mind and body. Darwin's interest dates back to his time as a medical student and the 1824 reprint of *Anatomy and Philosophy of Expression* by Sir Charles Bell, who advocated a spiritual dimension to the subject.

It also leads to an appreciation of the universal character of the expression, with its implication of a single origin for the entire human species; and Darwin points out the importance of emotional communication with children in their psychological development. Darwin sought the opinions of some of the leading British psychiatrists, notably James Crichton-Browne, in preparing the book which constitutes his main contribution to psychology. Among the innovations of this book is the distribution of a questionnaire by Darwin (probably inspired by his cousin, Francis Galton) during his preparatory research; simple psychology experiments on emotion recognition with his friends and family; and (borrowing from Duchenne de Boulogne, physician de la Salpêtrière) the use of photography in his presentation of scientific information. Publisher John Murray warned Darwin that including the photographs would put a hole in the profit of the book, and *Expression of Emotions* is an important milestone in the history of book

Affective Neuroscience Jaak Panksepp,2004-09-30 Some investigators have argued that emotions, especially animal emotions, are illusory concepts outside the realm of scientific inquiry. However, with advances in neurobiology and neuroscience, researchers are demonstrating that this position is wrong as they move closer to a lasting understanding of the biology and psychology of emotion. In *Affective Neuroscience*, Jaak Panksepp provides the most up-to-date information about the brain-operating systems that organize the fundamental emotional tendencies of all mammals. Presenting complex material in a readable manner, the book offers a comprehensive summary of the fundamental neural sources of human and animal feelings, as well as a conceptual framework for studying emotional systems of the brain. Panksepp approaches emotions from the perspective of basic emotion theory but does not fail to address the complex issues raised by constructionist approaches. These issues include relations to human consciousness and the psychiatric implications of this knowledge. The book includes chapters on sleep and arousal, pleasure and fear systems, the sources of rage and anger, and the neural control of sexuality, as well as the more subtle emotions related to maternal care, social loss, and playfulness. Representing a synthetic integration of vast amounts of neurobehavioral knowledge, including relevant neuroanatomy, neurophysiology, and neurochemistry, this book will be one of the most important contributions to understanding the biology of emotions since Darwin's *The Expression of the Emotions in Man and Animals*
