**The Psychology of Magic and the Magic of Psychology** Amir Raz, Jay A. Olson, Gustav Kuhn, 2016-11-18

Magicians have dazzled audiences for many centuries; however, few researchers have studied how, let alone why, most tricks work. The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena, including sensory illusions, misdirection of attention, and the appearance of mind-control and nuanced persuasion. Most studies to date have focused on either the psychological principles involved in watching and performing magic or “neuromagic” - the neural correlates of such phenomena. Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts, the history of magic reveals that scientific discovery often charts new territories for magicians. In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic. On the one hand, magic can inform psychology, with particular benefits for the cognitive, social, developmental, and transcultural components of behavioural science. Magicians have a large and robust set of effects that most researchers rarely exploit. Incorporating these effects into existing experimental, even clinical, paradigms paves the road to innovative trajectories in the study of human behaviour. For example, magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make. Moreover, magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab-based settings. Examining how magicians consistently influence spectators, for example, can elucidate important aspects in the study of persuasion, trust, decision-making, and even processes spanning authorship and agency. Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician. On the other hand, psychological science can advance the art of magic. The psychology of deception, a relatively understudied field, explores the intentional creation of false beliefs and how people often go wrong. Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities – perceptual, logical, emotional, and temporal – becomes all the more revealing when top-down influences, including expectation, symbolic thinking, and framing, join the fray. Over the years, science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences. Furthermore, on occasion science leads to the creation of novel effects, or the refinement of existing ones, based on systematic methods.

For example, by simulating a specific card routine using a series of computer stimuli, researchers have decomposed the effect and reconstructed it into a more effective routine. Other magic effects depend on meaningful psychological knowledge, such as which type of information is difficult to retain or what changes capture attention. Behavioural scientists measure and study these factors. By combining analytical findings with performer intuitions, psychological science begets effective magic. Whereas science strives on parsimony and independent replication of results, magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection. This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception.

**The Spectacle of Illusion** Matthew Tompkins, Matthew L. Tompkins, Wellcome, 2019-04 In *The Spectacle of Illusion*, professional magician-turned experimental psychologist Dr. Matthew L. Tompkins investigates the arts of deception as practised and popularised by mesmerists, magicians and psychics since the early 18th century. Organised thematically within a broadly chronological trajectory, this compelling book explores how illusions perpetuated by magicians and fraudulent mystics can not only deceive our senses but also teach us about the inner workings of our minds. Indeed, modern scientists are increasingly turning to magic tricks to develop new techniques to examine human perception, memory and belief. Beginning by discussing mesmerism and spiritualism, the book moves on to consider how professional magicians such as John Nevil Maskelyne and Harry Houdini engaged with these movements - particularly how they set out to challenge and debunk paranormal claims. It also relates the interactions between magicians, mystics and scientists over the past 200 years, and reveals how the researchers who attempted to investigate magical and paranormal phenomena were themselves deceived, and what this can teach us about deception. Highly illustrated throughout with entertaining and bizarre drawings, double-exposure spirit photographs and photographs of spoon-bending from hitherto inaccessible and un-mined archives, including the Wellcome Collection, the Harry Price Library, the Society for Physical Research, and last but not least, the Magic Circle's closely guarded collection, the book also features newly commissioned photography of planchettes, rapping boards, tilting tables, ectoplasm, automata and illusion boxes. Concluding with a modern-day analysis of the science of magic and illusion, analysing surprisingly weird phenomena such as ideomotor action, sleep paralysis, choice blindness and the psychology of misdirection, this unnerving volume highlights how unreliable our minds can be, and how complicit they can be in the

perpetuation of illusions.

**Experiencing the Impossible** Gustav Kuhn, 2019-03-12 How the scientific study of magic reveals intriguing—and often unsettling—insights into the mysteries of the human mind. What do we see when we watch a magician pull a rabbit out of a hat or read a person's mind? We are captivated by an illusion; we applaud the fact that we have been fooled. Why do we enjoy experiencing what seems clearly impossible, or at least beyond our powers of explanation? In *Experiencing the Impossible*, Gustav Kuhn examines the psychological processes that underpin our experience of magic. Kuhn, a psychologist and a magician, reveals the intriguing—and often unsettling—insights into the human mind that the scientific study of magic provides. Magic, Kuhn explains, creates a cognitive conflict between what we believe to be true (for example, a rabbit could not be in that hat) and what we experience (a rabbit has just come out of that hat!). Drawing on the latest psychological, neurological, and philosophical research, he suggests that misdirection is at the heart of all magic tricks, and he offers a scientific theory of misdirection. He explores, among other topics, our propensity for magical thinking, the malleability of our perceptual experiences, forgetting and misremembering, free will and mind control, and how magic is applied outside entertainment—the use of illusion in human-computer interaction, politics, warfare, and elsewhere. We may be surprised to learn how little of the world we actually perceive, how little we can trust what we see and remember, and how little we are in charge of our thoughts and actions. Exploring magic, Kuhn illuminates the complex—and almost magical—mechanisms underlying our daily activities.

**Exclusive Magical Secrets** Will Goldston,2015-04-14 **Exclusive Magical Secrets** was originally published by The Magician Ltd as a limited edition of 1000 in 1912. It was bound with a lock on the cover and became known as The Locked Book of Magical Secrets. The author, Will Goldston, was born in 1878 in Liverpool and first went on stage under the name Carl Devo. He later became the manager/buyer of Gamage's Theatrical and Entertainment Department. Goldston was an early member of the Magic Circle but resigned and formed his own society - The Magicians' Club of London with Harry Houdini as President, a post he held until his death. He set up in business as William Goldston Ltd in Aladdin House near Leicester Square in London where he sold magic tricks. The business was later bought by Davenports, the famous London magic shop. He edited a number of publications: Magician Annual (1907-1912), Magician Monthly (1904-1913), Magazine of Magic (1914-1930) and Golston's Magical Quarterly (1934-1940). If he had been alive today it is likely that Will Goldston would have been one of the most famous people in the world of magic. As it is his legacy stands, not only in his writings but also in the inspiration he gave to future generations of magicians. Like many other books of this era some of the tricks described use substances and methods that would be considered dangerous today and are most likely unobtainable. However, as magicians are always re-inventing old tricks in many cases there are simple substitutes. You are warned, however, not to take any risks. As with other offerings in The Golden Age of Magic series this volume is not a straightforward reproduction of the original text. There are a number of reasons for this. The main one, as with almost all early books, is that the typefaces used frequently make reading a chore rather than a pleasure. There is also the fact that the original printings were poorly edited, resulting in spelling errors and sometimes mistakes which completely alter the meaning of the text. Wherever possible we have endeavored to reproduce illustrations from the original to the highest possible standard and, in many cases, have been able to improve them. However, you should be aware that some illustrations in the original books were, themselves, copied from documents that were then many years old and some reproductions may not be to present day standards. However, we have taken the liberty of producing the book to make it both accurate and accessible. We would hope that, were the author alive today, he would very much approve of this edition.

Twelve Examples of Illusion Jan Westerhoff,2010-09-15 Tibetan Buddhist writings frequently state that many of the things we perceive in the world are in fact illusory, as illusory as echoes or mirages. In *Twelve Examples of Illusion*, Jan Westerhoff offers an engaging look at a dozen illusions--including magic tricks, dreams, rainbows, and reflections in a mirror--showing how these phenomena can give us insight into reality. For instance, he offers a fascinating discussion of optical illusions, such as the wheel of fire (the wheel seen when a torch is swung rapidly in a circle), discussing Tibetan explanations of this phenomenon as well as the findings of modern psychology, and significantly clarifying the idea that most phenomena--from chairs to trees--are similar illusions. The book uses a variety of crystal-clear examples drawn from a wide variety of fields, including contemporary philosophy and cognitive science, as well as the history of science, optics, artificial intelligence, geometry, economics, and literary theory. Throughout, Westerhoff makes both Buddhist philosophical ideas and the latest theories of mind and brain come alive for the general reader.

*Mind Magic and Mentalism For Dummies* James L. Clark,2012-03-27 The beginner's guide to mental magic No rabbits. No wands. Just dozens of first-rate effects, illusions, and tricks guaranteed to amaze. *Mind Magic & Mentalism For Dummies* pulls back the curtain and introduces the secret world of mentalism for the first time. With this book and the included DVD, budding practitioners have everything they need to master some of the most astounding illusions imaginable from exercising psychic powers and reading minds to harnessing mental energy to control fire and bend metal from across the stage. Each effect in the book is presented from three perspectives: what the audience sees, how the trick is performed, and how to present it in a way that thrills spectators, making it the comprehensive, essential guide to blowing your audience away. The DVD includes performances of many of the effects outlined in the book to help readers put the information into action Provides both introductory-level lessons on the art of performing and a host of great effects that will meet the needs of beginners *Mind Magic & Mentalism For Dummies* is the essential introduction to this mysterious art that can seemingly provide readers with the powers of clairvoyance, mind control, divination, and precognition. Note - CD-ROM/DVD and other supplementary materials are not included as part of the e-book file, but are available for download after purchase.

*Magic in Theory* Peter Lamont,Richard Wiseman,2005 A useful manual for any magician or curious spectator who wonders why the tricks seem so

real, this guide examines the psychological aspects of a magician's work. Exploring the ways in which human psychology plays into the methods of conjuring rather than focusing on the individual tricks alone, this explanation of the general principles of magic includes chapters on the use of misdirection, sleight of hand, and reconstruction, provides a better understanding of this ancient art, and offers a section on psychics that warns of their deceptive magic skills.

**Houdini on Magic** Walter Brown Gibson, Morris N. Young, 1953 Written by the master magician himself, this fascinating work reveals the secrets behind how Houdini escaped numerous death-defying stunts and exposed a variety of fake spiritualists. He also gives instructions for 44 eye-catching stage tricks, as well as other fascinating material. 155 illustrations.

**Sleights of Mind** Susana Martinez-Conde,Stephen L. Macknik,Sandra Blakeslee,2011-02-03 What can magic tell us about ourselves and our daily lives? If you subtly change the subject during an uncomfortable conversation, did you know you're using attentional 'misdirection', a core technique of magic? And if you've ever bought an expensive item you'd sworn never to buy, you were probably unaware that the salesperson was, like an accomplished magician, a master at creating the 'illusion of choice'. Leading neuroscientists Stephen Macknik and Susana Martinez-Conde meet with magicians from all over the world to explain how the magician's art sheds light on consciousness, memory, attention, and belief. As the founders of the new discipline of NeuroMagic, they combine cutting-edge scientific research with startling insights into the tricks of the magic trade. By understanding how magic manipulates the processes in our brains, we can better understand how we work - in fields from law and education to marketing, health and psychology - for good and for ill.
