**Personality and Intelligence at Work** Adrian Furnham, 2008-03-19 Personality and Intelligence at Work examines the increasingly controversial role of individual differences in predicting and determining behaviour at work. It combines approaches from organizational psychology and personality theory to critically examine the physical, psychological and psychoanalytic aspects of individual differences, and how they impact on the world of work. Topics covered include the role of IQ at work as the best predictor of success, but also the importance of increasingly recognized social intelligences such as emotional intelligence (EQ). The significance of personality traits and the impact of temperaments on work performance are also examined, and the methods used to assess work behaviour and potential are reviewed. Psychological tests, which measure personality traits, are questioned as accurate predictors of behaviour at work, alongside other factors such as job satisfaction, productivity, absenteeism and turnover. This thoroughly revised and updated edition of Personality at Work provides a comprehensive review of the relevant literature from psychology, sociology and management science. It will be of interest to students of organizational psychology and business and management studies, as well as HR professionals.

**Ion Implantation Techniques** H. Ryssel, H. Glawischnig, 2012-12-06 In recent years, ion implantation has developed into the major doping technique for integrated circuits. Several series of conferences have dealt with the application of ion implantation to semiconductors and other materials (Thousand Oaks 1970, Garmisch-Partenkirchen 1971, Osaka 1974, Warwick 1975, Boulder 1976, Budapest 1978, and Albany 1980). Another series of conferences was devoted more to implantation equipment and techniques (Salford 1977, Trento 1978, and Kingston 1980). In connection with the Third International Conference on Ion Implantation: Equipment and Techniques, held at Queen's University, Kingston, Ontario, Canada, July 8-11, 1980, a two-day instructional program was organized parallel to an implantation conference for the first time. This implantation school concentrated on aspects of implantation-equipment design. This book contains all lectures presented at the International Ion Implantation School organized in connection with the Fourth International Conference on Ion Implantation: Equipment and Techniques, held at the Convention Center, Berchtesgaden, Germany, September 13-17, 1982. In contrast to the first school, the main emphasis in this school was placed on practical aspects of implanter operation and application. In three chapters, various machine aspects of ion implantation (general concepts, ion sources, safety, calibration, dosimetry), range distributions (stopping power, range profiles), and measuring techniques (electrical and non-electrical measurement techniques, annealing) are discussed. In the appendix, a review of the state of the art in modern implantation equipment is given.

Fish osmoregulation has always attracted considerable attention and in the last years several studies have increased our knowledge of this physiological process. In this book several specialists have analyzed and reviewed the new data published regarding fish osmoregulation. The chapters present an integrative synthesis of the different aspects of this field focusing on osmoregulation in specific environments or situations, function of osmoregulatory organs, general mechanisms and endocrine control. In addition, interactions of osmoregulatory mechanisms with the immune system, diet and metabolism were also reviewed. New emerging techniques to study osmoregulation has also been analysed.
