### **A Climate of Injustice** J. Timmons Roberts,Bradley

Parks,2006-11-22 The global debate over who should take action to address climate change is extremely precarious, as diametrically opposed perceptions of climate justice threaten the prospects for any long-term agreement. Poor nations fear limits on their efforts to grow economically and meet the needs of their own people, while powerful industrial nations, including the United States, refuse to curtail their own excesses unless developing countries make similar sacrifices. Meanwhile, although industrialized countries are responsible for 60 percent of the greenhouse gas emissions that contribute to climate change, developing countries suffer the worst and first effects of climate-related disasters, including droughts, floods, and storms, because of their geographical locations. In *A Climate of Injustice*, J. Timmons Roberts and Bradley Parks analyze the role that inequality between rich and poor nations plays in the negotiation of global climate agreements. Roberts and Parks argue that global inequality dampens cooperative efforts by reinforcing the structuralist worldviews and causal beliefs of many poor nations, eroding conditions of generalized trust, and promoting particularistic notions of fair solutions. They develop new measures of climate-related inequality, analyzing fatality and homelessness rates from hydrometeorological disasters, patterns of emissions inequality, and participation in international environmental regimes. Until we recognize that reaching a North-South global climate pact requires addressing larger issues of inequality and striking a global bargain on environment and development, Roberts and Parks argue, the current policy gridlock will remain unresolved.

Plan B Lester Russell Brown,2003 A bold new plan for those concerned about rising temperatures, population projections, and spreading water scarcity.

## **A World Environment Organization** Frank

Biermann,2017-03-02 In recent years, the debate on the establishment of a new international agency on environmental protection - a 'World Environment Organization' - has gained substantial momentum. Several countries, including France and Germany, as well as a number of leading experts and senior international civil servants have openly supported the creation of such a new international organization. However, a number of critics have also taken the floor and brought forward important objections. This book presents a balanced selection of articles of the leading participants in this debate, including both major supporters and opponents of creating a World Environment Organization. The volume is especially relevant to students and scholars of international relations, environmental policy and international law, as well as to practitioners of diplomacy, international negotiations, and environmental policy making.

**Rachel Carson** Karen F. Stein,2013-02-11 Karen F. Stein University of Rhode Island, Kingston, USA Rachel Carson is the twentieth century's most significant environmentalist. Her books about the sea blend science and poetry as they invite readers to share her celebration of the ocean's wonders. Silent Spring, her graphic and compelling exposé of the damage caused by the widespread aerial spraying of persistent organic pesticides such as DDT, opened our eyes to the interconnectedness of all living beings and the ecological systems we inhabit. Carson's work challenges our belief that science and technology can control the natural world, asks us to recognize our place in the world around us, and inspires us to treat the earth respectfully. She calls us to rekindle our sense of wonder at nature's power and beauty, and to tread lightly on the earth so that it will continue to sustain us and our descendants. This book guides readers on a journey through Carson's life and work, considers Carson's legacies, and points to some of the continuing challenges to sustainability. It provides a listing of resources for reading, learning, or teaching about the

environment, about nature writing, and about Carson and the crucial issues she addressed.

**Fairness in Adaptation to Climate Change** W. Neil Adger, Jouni Paavola, Saleemul Huq, M. J. Mace, 2006 Providing a scientific and policy analysis on the challenges of ensuring that adaptation to global climate change doesn't place unfair burdens on vulnerable populations, this book argues that the key to adapting to climate change lies in recognising the equity and justice issues inherent in its causes and in human responses to it.

Cloud Logistics Falco Jaekel, 2018-06-25 Falco Jaekel develops a reference architecture for cloud logistics systems. The reference architecture shows how to apply the principles and concepts of cloud computing (e.g. virtualization, service-orientation) to logistics system design and thus how to deliver certain physical logistics capabilities such as transport and storage with the essential cloud characteristics (e.g. on-demand, rapid elasticity, pay-per-use). Within certain scenarios, this innovative mode of delivery can reconcile logistics efficiency with effectiveness and thus may enable firms to achieve competitive advantage in dynamic environments.

**Turning Point** Robert Ayres, 2014-03-18 This text discusses the current basis of economic growth, concluding that it is failing to deliver, and is actually harming our prospects for future security. Further arguments propose a possible long-term strategy for economic revival - eco-restructuring. This strategy involves a shifting away from production of goods to production of services, closing material cycles and eliminating reliance on non-renewable resources.

Industrial Ecology Robert U. Ayres, Leslie Ayres, 1996 Examines strategic options for reducing wastes and pollution, and increasing

the productivity of materials using an industrial ecology perspective. The volume analyzes 13 generic cases, beginning with four families of metals (aluminium, chromium, copper and zinc), several families of chemicals (phosphates and flourine; sulfur-based, nitrogen-based and chlorine-based), silicon and several different types of waste. The book also discusses opportunities for creating industrial ecosystems by deliberate design which, using new processes in some instances, would facilitate the use of low value by-products as feed stocks for useful products. Apart from surveying the technological possibilities, the book also considers the public interest, institutional barriers and the range of possible alternatives that might be applicable.

*Technology and Vocational Education for Sustainable Development* Margarita Pavlova, 2008-12-14 Empowerment is the overarching idea used in this book. The term has a variety of meanings in different sociocultural and political contexts, including "self-strength, control, self-power, self-reliance, own choice, life of dignity in accordance with one's values, capable of fighting for one's rights, independence, own decision making, being free, awakening, and capability" (The World Bank, 2002, p. 10). However, the World Bank report observed that most definitions focus on issues of "gaining power and control over decisions and resources that determine the quality of one's life" (p. 10). This interpretation of empowerment provides a useful starting point for the development of the series of interconnected arguments explored here. Establishment of the basis for understanding, identifying and developing strategies through education necessary for individuals to be able to make choices that influence the quality of their lives is the main aim of this book. There are a number of assumptions and boundaries that frame this analysis. First, the book focuses on "agents"; however, empowerment is often conceptualised in terms of relationships between agency and structure (e. g. , Alsop, Bertelsen, & H- land, 2006). Agency could be defined as "an actor's or group's ability to make purposeful

choices – that is, the actor is able to envisage and purposively choose options” (p. 11).

**Global Change Management** Pierre L. Ibisch, Laura Geiger, Felix Cybulla, 2012

*Earth System Governance* Frank Biermann, 2014-11-28 A new model for effective global environmental governance in an era of human-caused planetary transformation and disruption. Humans are no longer spectators who need to adapt to their natural environment. Our impact on the earth has caused changes that are outside the range of natural variability and are equivalent to such major geological disruptions as ice ages. Some scientists argue that we have entered a new epoch in planetary history: the Anthropocene. In such an era of planet-wide transformation, we need a new model for planet-wide environmental politics. In this book, Frank Biermann proposes “earth system” governance as just such a new paradigm. Biermann offers both analytical and normative perspectives. He provides detailed analysis of global environmental politics in terms of five dimensions of effective governance: agency, particularly agency beyond that of state actors; architecture of governance, from local to global levels; accountability and legitimacy; equitable allocation of resources; and adaptiveness of governance systems. Biermann goes on to offer a wide range of policy proposals for future environmental governance and a revitalized United Nations, including the establishment of a World Environment Organization and a UN Sustainable Development Council, new mechanisms for strengthened representation of civil society and scientists in global decision making, innovative systems of qualified majority voting in multilateral negotiations, and novel institutions to protect those impacted by global change. Drawing on ten years of research, Biermann formulates earth system governance as an empirical reality and a political necessity.

**Health, Disease, and Illness** Arthur L. Caplan, James J. McCartney, OSA, Dominic A. Sisti, 2004-06-17 In the 1850s,

Drapetomania was the medical term for a disease found among black slaves in the United States. The main symptom was a strange desire to run away from their masters. In earlier centuries gout was understood as a metabolic disease of the affluent, so much so that it became a badge of uppercrust honor—and a medical excuse to avoid hard work. Today, is there such a thing as mental illness, or is mental illness just a myth? Is Alzheimer's really a disease? What is menopause—a biological or a social construction? Historically one can see that health, disease, and illness are concepts that have been ever fluid. Modern science, sociology, philosophy, even society—among other factors—constantly have these issues under microscopes, learning more, defining and redefining ever more exactly. Yet often that scrutiny, instead of leading toward hard answers, only leads to more questions. *Health, Disease, and Illness* brings together a sterling list of classic and contemporary thinkers to examine the history, state, and future of ever-changing concepts in medicine. Divided into four parts—Historical Discussions; Characterizing Health, Disease, and Illness; Clinical Applications of Health and Disease; and Normalcy, Genetic Disease, and Enhancement: The Future of the Concepts of Health and Disease—the reader can see the evolutionary arc of medical concepts from the Greek physician Galen of Pergamum (ca. 150 ce) who proposed that the best doctor is also a philosopher, to contemporary discussions of the genome and morality. The editors have recognized a crucial need for a deeper integration of medicine and philosophy with each other, particularly in an age of dynamically changing medical science—and what it means, medically, philosophically, to be human.

**The Great Mindshift** Maja Göpel, 2016-09-12 This book describes the path ahead. It combines system transformation research with political economy and change leadership insights when discussing the need for a great mindshift in how human wellbeing, economic prosperity and healthy ecosystems are

understood if the Great Transformations ahead are to lead to moresustainability. It shows that history is made by purposefully acting humans and introduces transformative literacy as a key skill in leading the radical incremental change

**A World in Transition** Bertelsmann Stiftung, 2014-06-01

What reforms must governments initiate in order to ensure the sustainability of their societies? What examples of success can we identify by systematically comparing countries around the world? And who will shape the political and economic future in the 21st century? This E-Book Reader is a supplement to the upcoming edition (June 2014) of our German language quarterly change, which takes as its focus A World in Transition. Addressing sustainability in governance, strategic steering capacity in policymaking, and the most important global and regional developments of the past three years, the contributions featured here are excerpts from publications published by the Verlag Bertelsmann Stiftung.

**Planning Futures** Philip Allmendinger, Mark Tewdwr-

Jones, 2005-06-29 Planning theory is currently in a confused state as a consequence of a number of changes over the last ten years in planning practice and social and economic theory. Even prior to these events, planning theory was an uncertain discipline, reflecting planning's precarious position between and resting upon a range of professional subject areas and philosophical roots. Planning Futures is an attempt to pin down the constantly evolving landscape of planning theory and to chart a path through this fast changing field. Planning Futures is an up-to-date reader on planning theory, but adds something more to the subject area

than a mere textbook. The contributors have attempted to bridge theory and practice while putting forward new theoretical ideas. By drawing upon examples from planning practice and case study scenarios, the authors ensure that the work discusses planning theory within the context of present planning practice. Case studies are drawn from an international arena, from the UK, Europe, South Africa and Australia.
