Foundations of Theory for Ancient Chinese Medicine Guohui Liu, 2015-06-21 Discussion of Cold Damage (Shang Han Lun) and contemporary texts of ancient China form the bedrock of modern Chinese medicine practice, yet these classic texts contain many concepts that are either hard to understand or confusing. Based on over thirty years' medical practice, and study of the texts, this book explains the concepts involved so that the clinical applications of the ancient texts can be better understood and put into practice. The author looks at the larger context of ancient Chinese culture and philosophy in terms of theoretical knowledge, scholarly approach, and mindset in order to explain the basis for the medical texts. He also discusses the work of later Chinese medical scholars in elucidating the texts. He then goes on to look at more specific issues, such as the six conformations, zang-fu organ theory, the theory of qi and blood, the theory of qi transformation, and how these are understood in the ancient texts. He also discusses shao yang and tai yang theory; the element of time, and its place in understanding six conformations diseases. This remarkable work of scholarship will clarify many questions

about the interpretation of the ancient texts for modern use, and will find a place on the bookshelf of every practitioner of Chinese medicine, as well as on those of scholars of Chinese medicine.

The Foundations of Traditional Chinese Medicine Henry C. Lu, 2013-09-06 Yin and yang are used to represent two opposing concepts on the one hand, and they are also used to stand for a harmony between two opposing elements on the other. All phenomena and objects in the universe can be classified into yin and yang. Five elements refer to wood (mu), fire (huo), earth (tu), metal (jin), and water (shui) which had been used by the ancient Chinese to explain away natural phenomena and their connections with each other. Energy, blood, body fluids are the material bases of the human body, they are the foundations underlying the activities of internal organs, meridians, tissues, and senses. The energy is moving pure and refined materials whose primary functions are those of pushing and warming, it belongs to yang; the blood and the body fluids are two names for water in the body under normal circumstances. The birth, growth, aging, and death as well as the attack and development of diseases are, all of them, the results of the movements and changes of the energy, the blood, and the body fluids.

Fundamentals of Traditional Chinese Medicine Hong-Zhou Wu, Zhaoqin Fang, 2013 Traditional Chinese medicine (TCM), with a history of thousands of years, is the crystallization of the ancient Chinese's experiences in their struggle against diseases. It is also an integral part of the Chinese's splendid culture. Under the influence and direction of classic Chinese philosophies, it has undergone long-term medical practice and infiltrated into, as well as absorbed from, other subjects in that point in time, thus gradually evolving into a unique medical theoretical system that contributed and is still contributing significantly to the healthcare of the Chinese and the prosperity of the Chinese nation. The basic theories of TCM are the theoretical foundations for guiding traditional Chinese preventive medicine and clinical medicine, and

encompass aspects such as the philosophical foundation for TCM, understanding the effects of TCM on the physiology and pathology of the human body, and the principles in TCM for life cultivation, rehabilitation, diagnostics, and therapeutics. In this sense, the basic theories are regarded not only as an important part of TCM, but also as a compulsory course fundamental to the study and research of TCM. This book is compiled to allow the majority of readers to understand the theory of TCM and its methods of diagnosing and treating diseases in a relatively short period of time. It provides a brief introduction to the basic characteristics and theory of TCM, and a detailed schedule of learning commonly occurring diseases and patterns and their estimated 60 corresponding prescriptions. This is a great attempt in initiating more people to understand and apply the theory of TCM to diagnose and treat common diseases and provide corresponding formulas.

Fundamentals of Chinese Medicine Guangren Sun, Douglas Darwin Eisenstark, Qingrong Zhang, 2014-07-01 The Fundamentals of Chinese Medicine is an international collaboration of Chinese medicine experts from both China and the west, and co-written by an experienced practitioner who has been teaching the subject in western schools. This book covers the theory of traditional Chinese medicine and discusses the topic in greater depth than any English language textbook available today. An abundance of classical references are also included here. The material in this text comprises course material for a professional course of training in TCM, which is also the basic material for studying and comprehension of other more advanced courses in TCM. The main contents include the physiological basis of essence-qi, yin-yang and the five phases, followed by the theories of essence, qi and blood, fluids, and spirit. Organ manifestation, channel and collateral theory, constitutional theory, etiology and patho-mechanism, and also principles of prevention and treatment are expounded upon. The knowledge in this textbook is approximately

equal to that for students of TCM colleges in China, and coincides with the requirements in the Examination Syllabus for TCM Professional Practitioners Worldwide.

Fundamentals of Chinese Medicine, 1995 This revised edition includes a glossary of terms and a materia medica and formulary sufficient to practice the treatments described in the text. As such it is not only a unique, absolutely-defined and referenced text, but also a self-contained and inexpensive course of study. As a basic text produced to a multi-author, multi-publisher voluntary standard, this revised edition is a unique key for scholars and clinicians alike.

Foundations of Chinese Medicine Penny Welsh, 2021-11-16 Chinese medicine is a sub-field of traditional medicine. It involves the usage of various forms of acupuncture, gua sha, herbal medicine, cupping therapy and dietary therapy. The basic principle of this field is that body's vital energy is moving through channels known as meridians and that it is connected to bodily organs and functions through branches. The basis of this field is rooted in the cosmological notions like five phases and yin-yang. According to this discipline, health is the interaction of internal and external entities and that disease arises because of disharmony. It is concerned primarily with the body's functions like breathing, digestion and temperature maintenance. This book is a valuable compilation of topics, ranging from the basic to the most complex theories and principles related to this field. It also unfolds the innovative aspects of chinese medicine which will be crucial for the holistic understanding of the subject matter. In this book, constant effort has been made to make the understanding of the difficult concepts of this discipline as easy and informative as possible, for the readers.

The Philosophical Foundations of Classical Chinese Medicine
Keekok Lee, 2017-05-04 This book makes Classical Chinese Medicine (CCM) intelligible to those who are not familiar with the tradition, many of whom may choose to dismiss it off-hand or to assess it negatively). Keekok Lee uses two related strategies: arguing that all science and therefore medicine cannot be understood without excavating its philosophical presuppositions and showing what those presuppositions are in the case of CCM compared with those of biomedicine. Such excavations enable Lee in turn to demonstrate the following theses: (1) the metaphysical/ontological core of a medical system entails its own methodology, how to understand, diagnose and treat an illness/disease; (2) CCM rests on process-ontology, is Wholist, its general mode of thinking is Contextual-dyadic, its implicit logic is multi-valent, its model of causality is non-linear and multi-factorial; (3) Biomedicine (in the main) rests on thing-ontology and dualism, is Reductionist, its logic is classical bi-valent, its model of causality

is linear and monofactorial; (4) hence to condemn CCM as “unscientific”/“pseudo-scientific”/plain “mumbo-jumbo” while privileging Biomedicine as the Gold Standard of scientificity is as absurd as to judge a cat to be inferior to a dog, using the criteria of “goodness” embodied in a dog-show.

Five Lectures on the Foundations of Chinese Medicine

Friedrich G. Wallner, 2009 The book contains the latest results of the research on the foundations of Traditional Chinese Medicine (TCM), done by Professor Wallner from Vienna and a group of leading TCM specialists. The research on TCM does not deal with single medical concepts, but concentrates on its foundations, the structure and form of this medical science. It discusses the relation of TCM and Western Medicine, a concept of science, their peculiarities and differences, the problems of a thoughtless mixture. The book mainly presents five lectures by Professor Wallner about his latest research on the structure of TCM. Additionally, the book contains contributions from TCM specialists as Zhang Weibo, Lan Feng-Li, and Günter Gunia.

We surveyed the most important events in its long history and the conditions that influenced its development, including the cultural and philosophical ideas and assumptions that led to the development of the particular methods and techniques of healing that characterize Chinese medicine. Our goal is not to give an exhaustive survey of the history and philosophy of Chinese medicine, but rather to convey the patterns of its development and allow readers to gain an understanding of the distinctive features of traditional Chinese medicine.
