Animal Crossing Kelsey Lewin, 2024-03 Before the world of *Animal Crossing* became a pandemic lifeline for millions, the social sim communication game *Dobutsu no Mori*, or *Animal Forest*, debuted in 2001 on Nintendo 64 in Japan, then once again in 2002 on GameCube to critical and commercial success all over the world. An open-ended casual game ahead of its time, *Animal Crossing* set the stage for the series's many incarnations to come with its focus on building community and friendship, its in-game currency of Bells, and its village of Animalese-speaking friends like Tom Nook, K.K. Slider, and the mean Mr. Resetti. You could visit the villages of your friends and give them

gifts--all without being connected to the internet. Video game preservationist and historian Kelsey Lewin tells the story of how a mundane-sounding game full of bug-catching, letter-writing, and furniture-collecting became one of Nintendo's best-loved franchises, with Animal Crossing: New Horizons eclipsing Super Mario Bros. for all-time sales in Japan, unlocking gaming's massive potential to tap into our desire to plant trees, find friends, and make the world a better place.

Persuasive Games Ian Bogost, 2010-08-13 An exploration of the way videogames mount arguments and make expressive statements about the world that analyzes their unique persuasive power in terms of their computational properties. Videogames are an expressive medium, and a persuasive medium; they represent how real and imagined systems work, and they invite players to interact with those systems and form judgments about them. In this innovative analysis, Ian

Bogost examines the way videogames mount arguments and influence players. Drawing on the 2,500-year history of rhetoric, the study of persuasive expression, Bogost analyzes rhetoric's unique function in software in general and videogames in particular. The field of media studies already analyzes visual rhetoric, the art of using imagery and visual representation persuasively. Bogost argues that videogames, thanks to their basic representational mode of procedurality (rule-based representations and interactions), open a new domain for persuasion; they realize a new form of rhetoric. Bogost calls this new form procedural rhetoric, a type of rhetoric tied to the core affordances of computers: running processes and executing rule-based symbolic manipulation. He argues further that videogames have a unique persuasive power that goes beyond other forms of computational persuasion. Not only can videogames support existing social and cultural positions, but they can also disrupt and change these positions themselves, leading to potentially significant long-term social change. Bogost looks at three areas in which videogame persuasion has already taken form and shows considerable potential: politics, advertising, and learning.
