Particulate Plastics in Terrestrial and Aquatic Environments Nanthi S.

Bolan, M.B. Kirkham, Claudia Halsband, Dayanthi Nugegoda, Yong Sik Ok, 2020-07-30 The manufacture of plastic as well as its indiscriminate disposal and destruction by incineration pollutes atmospheric, terrestrial, and aquatic ecosystems. Synthetic plastics do not break down; they accumulate in the environment as macro-, micro-, and nanoplastics. These particulate plastics are a major source of pollutants in soil and marine ecosystems. *Particulate Plastics in Terrestrial and Aquatic Environments* provides a fundamental understanding of the sources of these plastics and the threats they pose to the environment. The book demonstrates the ecotoxicity of particulate plastics using case studies and offers management practices to mitigate particulate plastic contamination in the environment. Features · Describes physical and chemical properties of particulate plastics in terrestrial and aquatic ecosystems · Presents information on characteristics of particulate plastics as impacted by weathering processes · Provides numerous approaches for managing particulate plastic contamination · Identifies sources of particulate plastics in the environment; distribution and characteristics of particulate plastics; and management strategies of particulate plastics Written by a global team of scientists, this book is for researchers in the fields of environmental safety and waste management or individuals interested in the impact of particulate plastics on environmental health.

Consumer Product Innovation and Sustainable Design Robin Roy, 2015-10-23

Cleaning ability of Washing Powders Sumaanyu Maheshwari,2016-11-28 Research Paper (undergraduate) from the year 2015 in the subject Chemistry - Other, grade: A, , course: IB Chemistry HL, language: English, abstract: I researched and studied the effect of temperature and concentration of the detergent, Sodium Lauryl Sulphate, on the cleaning ability of various popular washing powders, in terms of surface tension. Furthermore, it was the minimum concentration of LAS that must be present and maximum value of the surface was determined. I researched and found that the cleaning ability is a function of the surface tension and that washing powders contain surfactants or detergents like Sodium Lauryl Sulphate (LAS) that lower the surface tension. Surface tension causes the surface portion of liquid to be attracted to another surface. Thus lowering the surface tension allows the water to spread further and can penetrate into the holes and pores of the surface giving a better cleaning performance. However, these detergents only work if they are at their Critical Micelle Concentration. Keeping the CMC of LAS in mind, I took different concentrations of it so as to find the maximum value of surface tension that must be passed for effective cleaning.

Nanosensors and Nanodevices for Smart Multifunctional Textiles Andrea

Ehrmann, Tuan Anh Nguyen, Phuong Nguyen Tri, 2020-09-16 Nanotechnology has been incorporated into a wide range of garments to improve the durability of clothing / apparel and create new properties for a special end-used application. It also incorporates wearable electronics into clothing to make it smarter. Smart nano-textiles refers to the uses and integration of smart nanocoatings, nanosensors and nanodevices in multifunctional textiles, since they are both low cost and have low power consumption. Various organic and inorganic nanomaterials can be used in garments to improve their properties and create new properties such as anti-bacterial, superhydrophobic, auto-cleaning, self-cleaning, stain repellent, wrinkle-free, static eliminating, fire resistant and electrically conductive properties. This book focuses on the fundamental concepts and approaches for the preparation of smart nanotextiles, their properties, and their applications in multifarious industries, including smart garments, biomedicine, construction/building materials, energy conversion/storage, automotive/aerospace industries and agriculture. Shows how nanotechnology is being used to be able to enhance textiles with smart properties, including anti-bacterial, superhydrophobic and auto-cleaning Explores which nanomaterial types are most compatible with particular textile classes Assesses the major challenges of integrating nanosensors and nanodevices into textiles

Design for Society Nigel Whiteley, 1997-06-01 Although design has become eminently newsworthy among the general public in our society, there is very little understanding to be found of the values and implications that underlie it. Design generates much heat but little light: we live in a world that has much design consciousness, but little design awareness. Nigel Whiteley analyses design's role and status today, and discusses what our

obsession with it tells us about our own culture. Design for Society is not an anti-design book; rather, it is an anti-consumerist-design book, in that it reveals what most people would agree are the socially and ecologically unsound values and unsatisfactory implications on which the system of consumerist design is constructed. In so doing, it prepares the ground for a more responsible and just type of design.
