## **Theatre Buildings** Association of British Theatre

Technicians, 2010-06-08 The Association of British Theatre Technicians produced its first guide to the design and planning of theatres in 1972. Revised in 1986, it became the standard reference work for anyone involved in building, refurbishing, or creating a performance space. *Theatre Buildings* – a design guide is its successor. Written and illustrated by a highly experienced team of international theatre designers and practitioners, it retains the practical approach of the original while extending the scope to take account of the development of new technologies, new forms of presentation, changing expectations, and the economic and social pressures which require every part of the theatre to be as productive as possible. The book takes the reader through the whole process of planning and designing a theatre. It looks in detail at each area of the building: front of house, auditorium, backstage, and administrative offices. It gives specific guidance on sightlines, acoustics, stage engineering, lighting, sound and video, auditorium and stage formats. Aspects such as catering, conference and education use are also covered. The information is supplemented by twenty-eight case studies, selected to provide examples which range in size, style and format and to cover new buildings, renovations, conversions, temporary and found space. The studies include Den Norsk, Oslo; The Guthrie Theatre, Minneapolis; The Liceu, Barcelona; Les Bouffes du Nord, Paris; The RSC's Courtyard Theatre in Stratford on Avon; and the MTC Theatre in Melbourne. All have plans and sections drawn to 1:500 scale. The book contains around 100 high quality full colour images as well as over 60 specially drawn charts and diagrams explaining formats, relationships and technical details.

*Auditorium Acoustics and Architectural Design* Michael Barron, 1993 Modern concert halls and opera houses are now very specialized buildings with special acoustical characteristics. This book is an important resource for architects, engineers and

auditorium technicians.

Theatres Roderick Ham, 2014-05-12 Theatres: Planning Guidance for Design and Adaptation focuses on the design, type and size, safety, acoustics, and lighting systems of theaters. The publication first takes a look at the type and size of theaters, design of auditorium, sightlines, acoustics, and safety. Discussions focus on hazards and safeguards, fire-fighting appliances, sprinkler systems and smoke detectors, reverberation, methods of adjusting acoustics, curved and concave surfaces, staggered seating, acoustic limits, and concert and recital halls. The book then examines exits and means of escape, seating layout and safety regulations, legislation, and stage scenery. The manuscript ponders on stage lighting, communications, film projection, performance organization, and public areas. Topics include access for the disabled, lavatories, restaurant, repair workshops, property store, scene dock, projection suites, amplifier racks, direct projection, stage management performance control system, and access to lighting positions over the stage. The book also reviews the restoration of old theaters, conference facilities, art centers and studio theaters, electrical and mechanical services, and administration. The publication is a valuable reference for design engineers and researchers interested in the design and adaptation of theaters.

**Theatre buildings** Judith Strong, 1967 The Association of British Theatre Technicians produced its first guide to the design and planning of theatres in 1972. **Buildings for the Performing Arts** Ian Appleton,2012-05-31

This Design and Development Guide is an essential book for those who are involved in the initiation, planning, design and building of facilities for the various performing arts, from local to metropolitan locations. It includes the stages in the development, decisions to be taken, information requirements, feasibility and advice necessary in the design and development of a new or adapted building. Part one of this guide provides the background information about the organisation of the performing arts, the prevailing issues, the client and various building types. In the second part, the author deals with the components of design and development, identifying the roles of the client, advisors and consultants, the stages to be achieved, including client's proposal feasibility, the process of briefing, design and building and eventually hand-over and opening night, with a consideration of the building use. Studies include the assessment of demand, site

requirements, initial brief, building design and financial viability. Information requirements, as design standards, for the auditorium and platform/stage, and the support facilities, are included. Separate studies focus on the adaptation of existing buildings and provision for children and young persons. THE CONTENT COVERS A WIDE RANGE OF PERFORMING ARTS (CLASSICAL MUSIC, POP/ROCK, JAZZ, MUSICALS, DANCE, DRAMA) AND PROVIDES INFORMATION ON EACH AS AN ART FORM AND NECESSITIES TO HOUSE PERFORMANCES.

Auditorium Acoustics and Architectural Design Michael Barron, 2009-09-28 Modern concert halls and opera houses are now very specialized buildings with special acoustical characteristics. With new contemporary case-studies, this updated book explores these characteristics as an important resource for architects, engineers and auditorium technicians. Supported by over 40 detailed case studies and architectural drawings of 75 auditoria at a scale of 1:500, the survey of each auditorium type is completed with a discussion of current best practice to achieve optimum acoustics.

Part I is a guide to the concepts and practices of architecture and construction, as applied to performing arts buildings. Part II is a guide to the design of performing arts buildings, with detailed descriptions of the unique requirements of these buildings. Each concept is illustrated with line drawings and examples from the author's extensive professional practice. This book is written for students in Theatre Planning courses, along with working practitioners.

**Theatres and Auditoriums** Harold Burris-Meyer, Edward Cyrus Cole, 2012-03-01

*Concert Hall Acoustics* Yoichi Ando, 2012-12-06 The acoustic quality of a concert hall has frequently posed a mysterious puzzle, namely, what physical aspects of the sound field can produce superior sound for the listener. The author has been probing for more than a decade into the subjective qualities preferred for musical and speech sounds. The result of his extensive investigations - the discovery that four and only four independent parameters contribute effectively to good acoustics - is summarized in the present book. The capability of calculating acoustical quality at any seat in a proposed concert hall is a unique and quite useful aspect of Ando's design method.

Alternative architectural schemes can be compared based on the number of seats which exceeds a previously accepted minimum standard of acoustical quality.

**Architects' Data** Ernst Neufert, Peter Neufert, 1991-01-15 This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion table. The illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.

**Stage Lighting Design** Neil Fraser, 2011-10-18 In Stage Lighting Design Neil Fraser, who teaches the subject at RADA, provides a comprehensive guide to designing effective and appropriate stage lighting. Assuming no previous knowledge, the book guides the reader through the various aspects involved in this craft. The text is accompanied by practical exercises to encourage the reader to explore and try out the concepts

discussed. These exercises are designed to allow the reader to discover the reality of what works at a technical level and at an artistic level, and can be used within a limited budget. The emphasis is on the practical, and each exercise is followed by an analysis of expected results, lessons learnt and conclusions drawn.

**Space for Dance** Leslie Armstrong, Roger Morgan, National Endowment for the Arts. Design Arts Program, National Endowment for the Arts. Dance Program, 1984

**An Introduction to Architectural Design** J. Paul Guyer, 2018-08 This publication provides 400 pages of introductory technical guidance for architectural engineers, architects and construction managers interested in the building design process. The process is illustrated with six different building types. Here are the building types discussed: 1. CHILD DEVELOPMENT CENTERS, 2. FIRE STATIONS, 3. LIBRARIES, 4. MEDICAL FACILITIES, 5. THEATRES AND CONCERT HALLS, 6. GOLF COURSE CLUBHOUSES.

*Scene Design* Henning Nelms, 1970

**Theatres and Concert Halls** Birgit Schmolke, 2011 'Theatres and Concert Halls' introduces the 50 best theatres and concert halls built in Europe. The book presents outstanding architecture from Pritzker award winners, Zaha Hadid, Jean Nouvel, Herzog & de Meuron, Christian de Portzamparc and Rem Koolhaas.

**When Church Became Theatre** Jeanne Halgren Kilde, 2005 In the 1880s, socio-economic and technological changes in the United States contributed to the rejection of Christian architectural traditions and the development of the radically new auditorium church. Jeanne Kilde links this shift in evangelical Protestant architecture to changes in worship style and religious mission.

Concert Halls and Opera Houses Leo Beranek, 2012-12-06 This illustrated guide to 100 of the world's most important concert halls and opera houses examines their architecture and engineering and discusses their acoustical quality as judged by conductors and music critics. The descriptions and photographs will serve as a valuable guide for today's peripatetic performers and music lovers.

With technical discussions relegated to appendices, the book can be read with pleasure by anyone interested in musical performance. The photographs (specially commissioned for this book) and architectural drawings (all to the same scale) together with modern acoustical data on each of the halls provide a rich and unmatched resource on the design of halls for presenting musical performances. Together with the technical appendices, the data and drawings will serve as an invaluable reference for architects and engineers involved in the design of spaces for the performance of music.
