I'm a Teacher Too... Brent M Barry,2005-03 All too often in our great nation's history there seems to be some sort of a separation between the great expectations of the American Education system, the greatness of our masses, and the awesomeness of the Department of Defense. Some have said, No American Educator wants a soldier, sailor or airman telling them how to teach in the average American classroom.

NASA Allen Li,John Oppenheim,2002-07 Discusses the mechanisms that NASA has in place to capture, disseminate, and apply past lessons learned towards future mission success. It found that NASA's processes, procedures, and systems do not effectively capture and share lessons learned and therefore, NASA has no assurance that lessons are being applied towards future missions. The report includes recommendations to the NASA administrator on ways to strengthen the agency's learning processes and systems. It also includes two Appendices. Charts and tables.

Mission Mathematics II. Peggy House,Roger P. Day,Mary Jo Aiken,2005 Get your students into maths using outer space Mission Mathematics translates the NASA experience into language and experiences appropriate for young learners and provides teachers with mathematics activities that complement many of the available NASA resources for students and educators. These materials engage high school students in significant mathematics at an appropriate level; lay a conceptual foundation for understanding mathematical ideas; promote reasoning and problem solving and show contemporary applications of mathematics using contemporary methodologies. Sample activities include scaling planetary distances; modeling space-debris accumulation, collision probability and collision effects; investigating exponential growth; determining position in one, two and three dimensions and applying global positioning technology to real-life situations. Resource pages for students, selected solutions and teacher commentary are included. The Mission Mathematics II series The Mission Mathematics II series is developed by NASA and NCTM in an unprecedented effort to link the science of

aeronautics with the Standards that NCTM has developed for all aspects of mathematics education. Following the publication of the original Mission Mathematics series in 1997, this revision focuses on aligning the activities with NCTM's Principles and Standards for School Mathematics (2000) in the context of aerospace activities. The activities in each book focus on actively engaging students in NCTM's Process Standards, translating the work of engineers and scientists at NASA into language and experiences appropriate for young learners and providing teachers with mathematics activities that complement many of the available NASA resources for students and educators.

The Space Shuttle Program Davide Sivoletta,2017-06-09 This book tells the story of the Space Shuttle in its many different roles as orbital launch platform, orbital workshop, and science and technology laboratory. It focuses on the technology designed and developed to support the missions of the Space Shuttle program. Each mission is examined, from both the technical and managerial viewpoints. Although outwardly identical, the capabilities of the orbiters in the late years of the program were quite different from those in 1981. Sivoletta traces the various improvements and modifications made to the shuttle over the years as part of each mission story. Technically accurate but with a pleasing narrative style and simple explanations of complex engineering concepts, the book provides details of many lesser known concepts, some developed but never flown, and commemorates the ingenuity of NASA and its partners in making each Space Shuttle mission push the boundaries of what we can accomplish in space. Using press kits, original papers, newspaper and magazine articles, memoirs and interviews, this book provides the most up-to-date and comprehensive account available of the shuttle's many missions and will refocus interest on a remarkable flying machine and space program that is often pushed to the background.

Shuttle, Houston Paul Dye,2020-07-14 From the longest-serving Flight Director in NASA's history comes a revealing account of high-stakes Mission Control work and the Space Shuttle program that has redefined our relationship with the universe. A compelling look inside the Space Shuttle missions that helped lay the groundwork for the Space Age, Shuttle, Houston explores the determined personalities, technological miracles, and eleventh-hour

saves that have given us human spaceflight. Relaying stories of missions (and their grueling training) in vivid detail, Paul Dye, NASA's longest-serving Flight Director, examines the split-second decisions that the directors and astronauts were forced to make in a field where mistakes are unthinkable, and where errors led to the loss of national resources -- and more importantly one's crew. Dye's stories from the heart of Mission Control explain the mysteries of flying the Shuttle -- from the powerful fiery ascent to the majesty of on-orbit operations to the high-speed and critical re-entry and landing of a hundred-ton glider. The Space Shuttles flew 135 missions. Astronauts conducted space walks, captured satellites, and docked with the Mir Space Station, bringing space into our everyday life, from GPS to satellite TV. Shuttle, Houston puts readers in his own seat at Mission Control, the hub that made humanity's leap into a new frontier possible.
