The Old Bold Pilot Capt. Shakti Lumba, Capt. Priyanka Arora, 2021-11-17 Capt. Lumba has been a pilot, union leader and airline executive. He is one of Indian aviation's legends. His memoir will take you through the by-lanes of Indian Civil Aviation in all its glory. The book explains the Pilot Strike of 1992, the creation and success of Alliance Air (possibly India's first low-cost carrier), the operational start-up of IndiGo, India's premier and most successful low-cost carrier. Finally, it covers the safe landing at Laksh Farms, a place termed as a piece of heaven on earth! Readers will find this book more than just a memoir. There are valuable lessons of personal behaviour and integrity that are invaluable to ruminate about. In addition, the historically accurate perspectives of starting and running an airline provide valuable tips for students studying aviation management or even for executives operating in that space today.

The Colour Encyclopedia of Incredible Aeroplanes

Philip Jarrett, 2011-06 Spiffing gift book for aviation fanatics everywhere. Hello chaps! You know, I've spent the best years of my life in dogfights flying some of the world's finest aeroplanes - now I find all my favourites are in this jolly old book, *The Colour Encyclopedia of Incredible Aeroplanes*. From my old chariot the Spitfire right through to the Aircanad BD-19 RGS, you'll find everything you ever wanted to know. Pick up technical bits and bobs from the specification of every plane, to country of origin, type, performance and climb rate (I know you'll be interested in that!) as well as nerve-tingling quotes from many of my old muckers. See the whites of pilots eyes in jolly aeroplane shots from every angle - watch them zooming through the sky and from every enticing angle. A proper, old-fashioned book with hundreds of handsome pictures, it's a damned attractive package. Chocs away!

The Turbine Pilot's Flight Manual Gregory N. Brown, Mark J. Holt, 2001-10-25 Highly illustrated and

clearly written, The Turbine Pilot's Flight Manual is a must have for all pilots. It offers a complete description of turbine aircraft engines and systems including turboprops and jets. Additional chapters on high-speed aerodynamics, multipilot crew co-ordination, wake turbulence and high altitude weather are discussed at length. The book is perfect for not only those involved in pure jet operations; but for those involved in turboprop, multipilot operations, and transition training. It is a key tool for a successful turbine aviation career.

Aircraft Fuel Systems Roy Langton, Chuck Clark, Martin Hewitt, Lonnie Richards, 2009-05-18 All aspects of fuel products and systems including fuel handling, quantity gauging and management functions for both commercial (civil) and military applications. The fuel systems on board modern aircraft are multi-functional, fully integrated complex networks. They are designed to provide a proper and reliable management of fuel resources throughout all phases of operation, notwithstanding changes in altitude or speed, as well as to monitor system functionality and advise the flight crew of any operational anomalies that may develop. Collates together a wealth of information on fuel system design that is currently disseminated throughout the literature. Authored by leading industry experts from Airbus and Parker Aerospace. Includes chapters on basic system functions, features and functions unique to military aircraft, fuel handling, fuel quantity gauging and management, fuel systems safety and fuel systems design and development. Accompanied by a companion website housing a MATLAB/SIMULINK model of a modern aircraft fuel system that allows the user to set up flight conditions, investigate the effects of equipment failures and virtually fly preset missions. Aircraft Fuel Systems provides a timely and invaluable resource for engineers, project and programme managers in the equipment supply and application communities, as well as for graduate and postgraduate students of mechanical and aerospace engineering. It constitutes an invaluable addition to the established Wiley Aerospace Series.

The Lunar Atmosphere and Dust Environment

Explorer Mission (LADEE) Richard C. Elphic, Christopher T. Russell, 2015-06-15 This volume contains five articles describing the mission and its instruments. The first paper, by the project scientist Richard C. Elphic and his colleagues, describes the mission objectives, the launch vehicle, spacecraft and the mission itself. This is followed by a description of LADEE's Neutral Mass Spectrometer by Paul Mahaffy and company. This paper describes the investigation that directly targets the lunar exosphere, which can also be explored optically in the ultraviolet. In the following article Anthony Colaprete describes LADEE's Ultraviolet and Visible Spectrometer that operated from 230 nm to 810 nm scanning the atmosphere just above the surface. Not only is there atmosphere but there is also dust that putatively can be levitated above the surface, possibly by electric fields on the Moon's surface. Mihaly Horanyi leads this investigation, called the Lunar Dust Experiment, aimed at understanding the purported observations of levitated dust. This experiment was also very successful, but in this case their discovery was not the electrostatic levitation of dust, but that the dust was raised by meteoroid impacts. This is not what had been expected but clearly is the explanation that best fits the data. Originally published in Space Science Reviews, Volume 185, Issue 1-4, 2014.
