Provence Jerome Coignard, 2003 Proud villas, farms surrounded by cultivated land, simple stone buildings in the middle of vineyards, and fields of lavender: that's Provence, and these homes, photographed by Maisons Côte Sud magazine, showcase the region's beauty and style. On display are brick tiles that stay cool in the summer, big clay pots displayed on either side of a door, mosaic stone paving, sunny kitchens full of yellow and green earthenware, comfortable bedrooms with cotton furnishings, wrought-iron banisters, gates, and window grills, and courtyards bathed in dappled light. It all adds up to a combination of heritage and stylishness unlike any other.

The Populist Challenge Jens Rydgren, 2004 During the last decade and a half a new political party family, the extreme Right-wing populist (ERP) parties, has established itself in a variety of West European democracies. These parties represent a monist politics based on ethnic nationalism and xenophobia as well as an opposition against the 'political establishment'. Being the prototypic ERP party, the French Front National (FN) has been a model for ERP parties emerging elsewhere in Western Europe. This study presents a theoretically based explanation that combines the macro and the

micro-level, as well as the political supply and the demand-side. More specifically, this study shows that it is necessary to consider both opportunity structures, created by demand and supply-side factors, as well as the ability of the FN to take advantage of the available opportunities. Of particular interest is the author's analysis of the sociology and attitudes of the FN-voters.

Chinese in France amid the Covid-19 Pandemic, 2023-10-30 The day after the epidemic broke out in Wuhan, Chinese people in France are already busy sending masks across borders and sharing media information; at the same time, a significant number of Chinese people are victims of racist attacks, insults and discrimination in France. Based on both quantitative and qualitative empirical data, this book reveals the new dynamics and interactions generated by the Covid-19 pandemic not only between different sub-groups of Chinese in France, but also between ethnic Chinese and their both countries: China and France. Mutual aid, local or transnational solidarity, inclusion initiatives, like any act of exclusion and hostility, invite you to question the essence of humanity in transnational settings, beyond the racialization of the Covid-19 virus.

Speaking in a Second Language Rosa Alonso Alonso, 2018-04-15 For millions of individuals all over the world, speaking in a second language is a daily activity. It is therefore important that research in applied linguistics should contribute empirically to the study of second language spoken interaction. The aim of this volume is to make such a contribution by providing research-based insights into current approaches to the teaching and learning of this skill. Two key dimensions define the papers included here—their novelty and scope. First, the book provides a novel approach to the study of speaking in a second language by combining recent findings in usage-based linguistics with current issues in teaching. Second, the chapters cover a range of theoretical perspectives, including sociolinguistic and interactional competence, gestures, dynamic systems theory and code-switching. The volume offers a contemporary analysis of research in second language speaking that will be of interest to researchers, graduate students, teachers and other professionals working in the fields of communication and applied linguistics.

Categorical Data Analysis for the Behavioral and Social Sciences Razia Azen, Cindy M. Walker, 2021-05-26 Featuring a practical approach with numerous examples, the second edition of *Categorical Data Analysis for the Behavioral and Social Sciences* focuses on helping the reader develop a conceptual understanding of categorical methods, making it a much more accessible text than others on the market. The authors cover common categorical analysis methods and emphasize specific research questions that can be addressed by each analytic procedure, including how to obtain results using SPSS, SAS, and R, so that readers are able to address the research questions they wish to answer. Each chapter begins with a Look Ahead section to highlight key content. This is followed by an in-depth focus and explanation of the relationship between the initial research question, the use of software to perform the analyses, and how to interpret the output substantively. Included at the end of each chapter are a range of software examples and questions to test knowledge. New to the second edition: The addition of R syntax for all

analyses and an update of SPSS and SAS syntax. The addition of a new chapter on GLMMs. Clarification of concepts and ideas that graduate students found confusing, including revised problems at the end of the chapters. Written for those without an extensive mathematical background, this book is ideal for a graduate course in categorical data analysis taught in departments of psychology, educational psychology, human development and family studies, sociology, public health, and business. Researchers in these disciplines interested in applying these procedures will also appreciate this book's accessible approach.

Causal Models : How People Think about the World and Its Alternatives

Steven Sloman Professor of Psychology Brown University, 2005-07-02 Human beings are active agents who can think. To understand how thought serves action requires understanding how people conceive of the relation between cause and effect, between action and outcome. In cognitive terms, how do people construct and reason with the causal models we use to represent our world? A revolution is occurring in how statisticians, philosophers, and computer scientists answer this question. Those fields have ushered in new insights about causal models by thinking about how to represent causal

structure mathematically, in a framework that uses graphs and probability theory to develop what are called causal Bayesian networks. The framework starts with the idea that the purpose of causal structure is to understand and predict the effects of intervention. How does intervening on one thing affect other things? This is not a question merely about probability (or logic), but about action. The framework offers a new understanding of mind: Thought is about the effects of intervention and cognition is thus intimately tied to actions that take place either in the actual physical world or in imagination, in counterfactual worlds. The book offers a conceptual introduction to the key mathematical ideas, presenting them in a non-technical way, focusing on the intuitions rather than the theorems. It tries to show why the ideas are important to understanding how people explain things and why thinking not only about the world as it is but the world as it could be is so central to human action. The book reviews the role of causality, causal models, and intervention in the basic human cognitive functions: decision making, reasoning, judgment, categorization, inductive inference, language, and learning. In short, the book offers a discussion about how people think, talk, learn, and explain things in causal terms, in terms of action and manipulation.
