Where Have All the Textbooks Gone? Tony Read, 2015-07-22 This World Bank report is a rich compilation of information on teaching learning materials (TLM) in Africa based on the extensive and multi-faceted experience of the author's work in the education sector in Africa. The study examines a wide range of issues around TLM provision including curriculum, literacy and numeracy, language of instruction policy, procurement and distribution challenges, TLM development and production and their availability, management and usage in schools. It also looks at the role of information and communication technology (ICT) based TLMs and their availability. The study recognizes that improved TLM system management is a critical component in achieving affordable and sustainable TLM provision for all students. This study, which draws from more than 40 Anglophone, Francophone, Lusophone, and Arabic-speaking countries will be particularly useful for policymakers, development partners, and other stakeholders attempting to understand the wide range of issues surrounding the complexity of textbook provision in Sub Saharan Africa.

Soil-based Wastewater Treatment Jose A. Amador, George Loomis, 2020-01-22 Our book addresses the needs of practitioners, engineers, scientists, regulators, resource managers, planners, and others with a need to know about septic systems. It arose after discussions about the need for a text that integrated current understanding of the hydrologic, physical, chemical, and biological processes involved in the treatment of wastewater using soil. In our experience, people working with septic systems – ourselves included – have a fragmented understanding of what these systems are, how they function, how wastewater moves through soil, how and which pollutants are removed, and how these systems impact the environment and public health. The relevant information is scattered across disciplines, information sources and audiences. This book is an attempt to collect and integrate this information in one place, and provide a scientific framework for understanding soil-based wastewater treatment.

Using ICTs and blended learning in transforming technical and vocational education and training Latchem, Colin, Commonwealth of Learning, 2017-04-17

The Sciences in the European Periphery During the Enlightenment K. Gavroglu, 2013-03-07 The articles in this volume of ARCHIMEDES examine particular cases of 'reception' in ways that emphasize pressing historiographical and methodological issues. Such issues arise in any consideration of the transmission and appropriation of scientific concepts and practices that originated in the several 'centers' of European learning, subsequently to appear (often in considerably altered guise) in regions at the European periphery. They discuss the transfer of new scientific ideas, the mechanisms of their introduction, and the processes of their appropriation at the periphery. The themes that frame the discussions of the complex relationship between the origination of ideas and their reception include the ways in which the ideas of the Scientific Revolution were introduced, the particularities of their expression in each place, the specific forms of resistance encountered by these new ideas, the extent to which such expression and resistance displays national characteristics, the procedures through which new ways of dealing with nature were made legitimate, and the commonalities and differences between the methods developed by scholars for handling scientific issues.

Herbal Medicine in India Saikat Sen, Raja Chakraborty, 2019-09-10 This book highlights the medical importance of and increasing global interest in herbal medicines, herbal health products, herbal pharmaceuticals, nutraceuticals, food supplements, herbal cosmetics, etc. It also addresses various issues that are hampering the advancement of Indian herbal medicine around the globe; these include quality concerns and quality control, pharmacovigilance, scientific investigation and validation, IPR and biopiracy, and the challenge that various indigenous systems of medicine are at risk of being lost. The book also explores the role of traditional medicine in providing new functional leads and modern approaches that can offer elegant strategies for facilitating the drug discovery process. The book also provides in-depth information on various traditional medicinal systems in India and discusses their medical importance. India has a very long history of safely using many herbal drugs. Folk medicine is also a key source of medical knowledge and plays a vital role in maintaining health in rural and remote areas. Despite its importance, this form of medicine largely remains under-investigated. Out of all the traditional medicinal systems used worldwide, Indian traditional medicine holds a unique position, as it has continued to deliver healthcare throughout the Asian subcontinent since ancient times. In addition, traditional medicine has been used to derive advanced techniques and investigate many modern drugs. Given the scope of its coverage, the book offers a valuable resource for scientists and researchers exploring traditional and herbal medicine, as well as graduate students in courses on traditional medicine, herbal medicine and pharmacy.

The Rise of Victimhood Culture Bradley Campbell, Jason Manning, 2018-03-07 The Rise of Victimhood Culture offers a framework for understanding recent moral conflicts at U.S. universities, which have bled into society at large. These are not the familiar clashes between liberals and conservatives or the religious and the secular: instead, they are clashes between a new moral culture—victimhood culture—and a more traditional culture of dignity. Even as students increasingly demand trigger warnings and “safe spaces,” many young people are quick to police the words and deeds of others, who in turn claim that political correctness has run amok. Interestingly, members of both camps often consider themselves victims of the other. In tracking the rise of victimhood culture, Bradley Campbell and Jason Manning help to decode an often dizzying cultural milieu, from campus riots over conservative speakers and debates around free speech to the election of Donald Trump.

Integrative Learning Daniel Blackshields, James Cronin, Bettie Higgs, Shane Kilcommins, Marian McCarthy, Anthony Ryan, 2014-11-13 Current teaching, learning and assessment practices can lead students to believe that courses within a programme are self-sufficient and separate. Integrative Learning explores this issue, and considers how intentional learning helps students become integrative thinkers who can see connections in seemingly disparate information, and draw on a wide range of knowledge to make decisions. Written by international contributors who engaged reflectively with their teaching and their students' learning, the book seeks to develop a shared language of integrative learning, encouraging students to adapt skills learned in one situation to problems encountered in another, and make autonomous connections across courses, between experiences, and throughout their lives. More informed teachers can help students develop the

necessary attributes for intentional learning, which include having a sense of purpose, fitting fragmentary information into a 'learning framework', understanding something of their own learning processes, asking probing questions, reflecting on their own choices, and knowing when to ask for help. Integrative Learning draws on international research and vast studies to provide the reader with the resources to ensure access to a unified learning experience. The book discusses conceptual and technical tools necessary for facilitating integrative learning across a range of disciplines as well as providing learning pedagogies and considers integrative learning in the context of the relevance of higher education in the complexity and uncertainty of the 21st century. It will appeal to academics and researchers in the field of higher education, as well as those generating higher education curriculums.

Palliative Care for Chronic Cancer Patients in the Community Michael Silbermann,2020-10-29 The new global cancer data suggests that the global burden has risen to 18.1 million new cases per year and 9.6 million cancer deaths per year. A number of factors appear to be driving this increase, in particular, a growing and aging global population and an increase of exposure to cancer risk factors linked to social and economic development. For rapidly-growing economies, the data suggests a shift from poverty- or infection-related cancers to those associated with lifestyles more typical in industrialized countries. There is still large geographical diversity in cancer occurrence and variations in the magnitude and profile of the disease between and within world regions. There are specific types of cancer that dominate globally: lung, female breast and colorectal cancer, and the regional variations in common cancer types signal the extent to which societal, economic and lifestyle changes interplay to differentially impact on the profile of this most complex group of diseases. Unfortunately, despite advances in cancer care, a significant proportion of patients at home, experience sub-optimal outcomes. Barriers to successful treatment outcomes include, but are not limited to: access to oncologists in the primary health centers, non-adherence, lack of experienced oncology and palliative care nurses in the community, inadequate monitoring and the lack of training of family and pediatric physicians. Telemedicine approaches, including telephone triage/education, telemonitoring, teleconsultation and status tracking through mobile applications, have shown promise in further improving outcomes, in particular for chronic cancer patients following their hospitalization. Lessons can be learned from existing hospices in North America, the United Kingdom, Australia, Centers of Excellence in African (Uganda) and modern community services in India (Kerala). An important goal of this book is to describe and encourage professionals to develop new community programs in palliative care, which include training and empowering physicians and nurses in the community on the principles of palliative care. The Middle East Cancer Consortium (MECC) together with the American Society of Clinical Oncology (ASCO) and the American Oncology Nursing Society (ONS) have conducted multiple courses ranging from basic palliative care to more specialized training in palliative care for multiple nationalities in Europe, Asia and Africa. Our experience clearly indicates that, to promote such activities, one needs strong leadership and confirmed political will to support the endeavor. The new book will emphasize the importance of having a core of multiple stakeholders including community leaders, government, NGOs and media to be actively involved in advocating for the cause and generating public awareness. This text will provide the reader with a comprehensive understanding of the outside-of-the-hospital treatment of cancer patients by medical, paramedical and volunteer personnel. In doing so, this text will encourage the creation of new palliative care services improving upon the existing ones and stimulate further research in this field. Part 1 of the text will begin with an overview of the current state of affairs of services provided to cancer patients while being cared for by primary health centers. It will also review the current literature regarding medical and psychological-based therapy options in the community for cancer patients at different stages of their disease. Part 2 will address the unique role of the community nurse, within the framework of the multidisciplinary team treating the patient, in the attempt to provide optimal evaluation and care in very challenging situations (such as with terminal patients). Part 3 will provide insightful models of this new discipline and serve as a valuable resource for physicians, nurses, social workers and others involved in the care of cancer patients. The book will take a multidisciplinary approach, integrating clinical and environmental data for practical management to enhance the efficacy of treatment while relieving suffering. Part 4 will also discuss the application of modern technological approaches to track symptoms, quality of life, diet, mobility, duration of sleep and medication use (including pain killers) in chronic cancer patients in the community. Part 5 of the book will also be devoted to modes of developing a collaborative program between governmental and non-governmental organization sectors. This includes volunteer workers in close collaboration with medical professionals for providing emotional and spiritual support, nursing care, nutritional support and empowering family caregivers. Such a model makes palliative care in the community a "people's movement", thus transferring part of the responsibility and ownership to the community.

Innovations in Computer Science and Engineering Harvinder Singh Saini,Rishi Sayal,Rajkumar Buyya,Govardhan Aliseri,2020-03-03 This book features a collection of high-quality, peer-reviewed research papers presented at the 7th International Conference on Innovations in Computer Science & Engineering (ICICSE 2019), held at Guru Nanak Institutions, Hyderabad, India, on 16-17 August 2019. Written by researchers from academia and industry, the book discusses a wide variety of industrial, engineering, and scientific applications of the emerging techniques in the field of computer science.

The Benchmarking Book Michael J. Spendolini,2000 This guide presents a pragmatic model for setting up a world-class bench-marking process. It explains how to determine what products or processes to benchmark, form a team, identify partners, collect and analyze the information, and take action based on the results.

Education Policy Reform Trends in G20 Members Yan Wang,2014-01-17 G20 members bring together the world's major advanced and emerging economies, as well as the European Union. Together they represent some 90% of global GDP, 80% of global trade and two-thirds of the world's population. In recognition of educational development as a key driver of economic development, the G20 members have put education reform high on their policy agenda in order to meet the challenges and embrace the opportunities ahead. Their experiences and lessons in education reform will not only showcase the global trend of education development, but also will provide valuable reference and inspiration for undertaking education reform to advance national development in China as well as other countries. This book documents recent policy reform in G20 members' systems, showcases the global trends in education policy, serves as a valuable reference tool and also provide inspiration for undertaking education reform to advance development in related countries.

The End of the Cognitive Empire Boaventura de Sousa Santos,2018-07-16 In *The End of the Cognitive Empire* Boaventura de Sousa Santos further develops his concept of the epistemologies of the South, in which he outlines a theoretical, methodological, and pedagogical framework for challenging the dominance of Eurocentric thought. As a collection of knowledges born of and anchored in the experiences of marginalized peoples who actively resist capitalism, colonialism, and patriarchy, epistemologies of the South represent those forms of knowledge that are generally discredited, erased, and ignored by dominant cultures of the global North. Noting the declining efficacy of established social and political solutions to combat inequality and discrimination, Santos suggests that global justice can only come about through an epistemological shift that guarantees cognitive justice. Such a shift would create new, alternative strategies for political mobilization and activism and give oppressed social groups the means through which to represent the world as their own and in their own terms.

Animal Rights Education Kai Horsthemke,2019-10-29 This book explores how the ethical treatment and status of other-than-human animals influence pedagogy, teaching, and learning in general, aiming to fill what has been a gap in the philosophy of education. It examines key trends in this regard, including environmental education, humane education, posthumanist education,

ecopedagogy, critical animal pedagogy, critical animal studies, animal standpoint theory, and vegan education. The book discusses animal minds and interests, and how animals have been accommodated in moral theory. Further, it investigates whether anti-racist and anti-sexist education logically entail anti-speciesist education and closes by proposing animal rights education as a viable and sound alternative, a pedagogy that does justice not only to animals in general and as species, but also to individual animals. If animal rights education is philosophically and educationally meaningful, then it can arguably offer a powerful pedagogical tool, and facilitate lasting pro-animal changes.

Anthropologies of Unemployment Jong Bum Kwon, Carrie M. Lane, 2016-09-09 *Anthropologies of Unemployment* offers accessible, theoretically innovative, and ethnographically rich examinations of unemployment in rural and urban regions across North and South America, Europe, Africa, and Asia. The diversity of case studies demonstrates that unemployment is a pressing global phenomenon that sheds light on the uneven consequences of free-market ideologies and policies. Economic, social, and cultural marginalization is common in the lives of the unemployed, but their experience and interpretation are shaped by local and national cultural particularities. In exploring those differences, the contributors to this volume employ recent theoretical innovations and engage with some of the more salient topics in contemporary anthropology, such as globalization, migration, youth cultures, bureaucracy, class, gender, and race. Taken together, the chapters reveal that there is something new about unemployment today. It is not a temporary occurrence, but a chronic condition. In adjusting to persistent, longstanding unemployment, people and groups create new understandings of unemployment as well as of work and employment; they improvise new forms of sociality, morality, and personhood. Ethnographic studies such as those found in *Anthropologies of Unemployment* are crucial if we are to understand the broader forms, meanings, and significance of pervasive economic insecurity and discover the emergence of new social and cultural possibilities.

Education Policy in Developing Countries Paul Glewwe, 2013-12-17 Almost any economist will agree that education plays a key role in determining a country's economic growth and standard of living, but what we know about education policy in developing countries is remarkably incomplete and scattered over decades and across publications. *Education Policy in Developing Countries* rights this wrong, taking stock of twenty years of research to assess what we actually know—and what we still need to learn—about effective education policy in the places that need it the most. Surveying many aspects of education—from administrative structures to the availability of health care to parent and student incentives—the contributors synthesize an impressive diversity of data, paying special attention to the gross imbalances in educational achievement that still exist between developed and developing countries. They draw out clear implications for governmental policy at a variety of levels, conscious of economic realities such as budget constraints, and point to crucial areas where future research is needed. Offering a wealth of insights into one of the best investments a nation can make, *Education Policy in Developing Countries* is an essential contribution to this most urgent field.
