Research Methods in Language Teaching and Learning Kenan Dikilitas,Kate Mastruserio Reynolds,2022-03-15 A practical guide to the methodologies used in language teaching and learning research, providing expert advice and real-life examples from leading TESOL researchers *Research Methods in Language Teaching and Learning* provides practical guidance on the primary research methods used in second language teaching, learning, and education. Designed to support researchers and students in language education and learning, this highly accessible book covers a wide range of research methodologies in the context of actual practice to help readers fully understand the process of conducting research. Organized into three parts, the book covers qualitative studies, quantitative studies, and systematic reviews. Contributions by an international team of distinguished researchers and practitioners explain and demonstrate narrative inquiry, discourse analysis, ethnography, heuristic inquiry, mixed methods, experimental and quasi-experimental studies, and more. Each chapter presents an overview of a method of research, an in-depth description of the research framework or data analysis process, and a meta-analysis of choices made and challenges encountered. Offering invaluable insights and hands-on research knowledge to students and early-career practitioners alike, this book: Focuses on the research methods, techniques, tools, and practical aspects of performing research Provides firsthand narratives and case studies to explain the decisions researchers make Compares the relative strengths and weaknesses of different research methods Includes real-world examples for each research method and framework to highlight the context of the study Includes extensive references, further reading suggestions, and end-of-chapter review questions Part of the *Guides to Research Methods in Language and Linguistics* series, *Research Methods in Language Teaching and Learning* is essential reading for students, educators, and researchers in all related fields, including TESOL, second language acquisition, English language teaching, and applied linguistics.

A Compendium of Neuropsychological Tests Esther Strauss,Elisabeth M. S. Sherman,Otfried Spreen,2006-04-06 For the practicing neuropsychologist or researcher, keeping up with the sheer number of newly published or updated tests is a challenge, as is evaluating the utility and psychometric properties of neuropsychological tests in a clinical context. The goal of the third edition of *A Compendium of Neuropsychological Tests*, a well-established neuropsychology reference text, is twofold. First, the Compendium is intended to serve as a guidebook that provides a comprehensive overview of the essential aspects of neuropsychological assessment practice. Second, it is intended as a comprehensive sourcebook of critical reviews of major neuropsychological assessment tools for the use by practicing clinicians and researchers. Written in a comprehensive, easy-to-read reference format, and based on exhaustive review of research literature in neuropsychology, neurology, psychology, and related disciplines, the book covers topics such as basic aspects of neuropsychological assessment as well as the theoretical background, norms, and the utility, reliability, and validity of neuropsychological tests. For this third edition, all chapters have been extensively revised and updated. The text has been considerably expanded to provide a comprehensive yet practical overview of the state of the field. Two new chapters have been added: *Psychometrics in Neuropsychological Assessment* and *Norms in Psychological Assessment*. The first two chapters present basic psychometric concepts and principles. Chapters three and four consider practical aspects of the history-taking interview and the assessment process itself. Chapter five provides

guidelines on report-writing and chapters six through sixteen consist of detailed, critical reviews of neuropsychological tests, and address the topics of intelligence, achievement, executive function, attention, memory, language, visual perception, somatosensory olfactory function, mood/personality, and response bias. A unique feature is the inclusion of tables that summarize salient features of tests within each domain so that readers can easily compare measures. Additional tables within each test review summarize important features of each test, highlight aspects of each normative dataset, and provide an overview of psychometric properties. Of interest to neuropsychologists, neurologists, psychiatrists, and educational and clinical psychologists working with adults as well as pediatric populations, this volume will aid practitioners in selecting appropriate testing measures for their patients, and will provide them with the knowledge needed to make empirically supported interpretations of test results.

Early Childhood Assessment National Research Council,Division of Behavioral and Social Sciences and Education,Board on Testing and Assessment,Board on Children, Youth, and Families,Committee on Developmental Outcomes and Assessments for Young Children,2008-12-21 The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. Early Childhood Assessment addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments.

Head Start Impact Michael J. Puma,2006 Since its beginning in 1965 as a part of the War on Poverty, Head Start's goal has been to boost the school readiness of low-income children. Based on a 'whole child' model, the program provides comprehensive services that include pre-school education; medical, dental, and mental health care; nutrition services; and efforts to help parents foster their child's development. Head Start services are designed to be responsive to each child's and family's ethnic, cultural, and linguistic heritage. The Congressionally-mandated Head Start Impact Study was conducted across 84 nationally representative grantee/delegate agencies. Approximately 5,000 newly entering 3- and 4-year-old children applying for Head Start were randomly assigned to either a Head Start group that had access to Head Start program services or to a non-Head Start group that could enrol in available community non-Head Start services, selected by their parents. Data collection began in fall 2002 and is scheduled to continue through 2006, following children through the spring of their 1st-grade year. The study quantifies the impact of Head Start separately for 3- and 4-year-old children across child cognitive, social-emotional, and health domains as well as ii on parenting practices. This book is essential reading for those in the education field.

Temporal Cognition: Its Development, Neurocognitive Basis, Relationships to Other Cognitive Domains, and Uniquely Human

Aspects Patricia J. Brooks, Danielle DeNigris, Laraine McDonough, 2019-11-04 Humans manifest an acute awareness of the passage of time and capacity for mental time travel, i.e., the ability to mentally place oneself in the past or future, as well as in counterfactual or hypothetical situations. The ability to perceive, estimate, and keep track of time involves multiple forms of representation (temporal concepts and frames of reference) and sensory modalities. Temporal cognition plays a critical role in various forms of memory (e.g., autobiographical memory, episodic memory, prospective memory), future-oriented thinking (foresight, planning), self-concepts, and auto-noetic consciousness. This Research Topic addresses the myriad ways that temporal cognition impacts human behavior, how it develops, its clinical relevance, and the extent to which aspects of temporal cognition are uniquely human. Papers in this Research Topic focus on the following: 1) Low-level perceptual mechanisms that track durations, intervals, and other temporal features of stimuli. 2) Inter-relatedness of temporal reasoning and language development. 3) Temporal cognition in children with autism. 4) Cross-domain mappings between space and time across visual and auditory modalities. 5) Assessing mental time travel as a uniquely human capacity. 6) Implications of individual differences in temporal processing for health and well-being.

Comic Strip Conversations Carol Gray, 1994 Carol Gray combines stick-figures with conversation symbols to illustrate what people say and think during conversations. Showing what people are thinking reinforces that others have independent thoughts--a concept that spectrum children don't intuitively understand. Children can also recognize that, although people say one thing, they may think something quite different--another concept foreign to concrete-thinking children. Children can draw their own comic strips to show what they are thinking and feeling about events or people. Different colors can represent different states of mind. These deceptively simple comic strips can reveal as well as convey quite a lot of substantive information. The author delves into topics such as: What is a Comic Strip Conversation? The Comic Strip Symbols Dictionary Drawing small talk Drawing about a given situation Drawing about an upcoming situation Feelings and COLOR

Word Finding Vocabulary Test Catherine Renfrew, Polly Mitchell, 2010-11-02 The extent to which pictures, objects, arranged in order of difficulty, can be named correctly is assessed using this test. Most of the objects illustrated have no alternative name, so the responses of children can be quickly measured. Completely revised, this new edition contains 50 line-drawn pictures, a manual and a photocopiable scoring form. Catherine Renfrew's three tests have been used for many years and provide a means of assessing children's speech and language. All tests are suitable for use with 3-8 year olds are norm referred to enable therapists to produce comparative results. Norms are given at six-monthly intervals for both the Action Picture Test and Word finding Vocabulary and monthly for the Bus Story Test.

Dynamic Assessment in Practice H. Carl Haywood, Carol S. Lidz, 2006-12-18 Dynamic assessment embeds interaction within the framework of a test-intervene-retest approach to psychoeducational assessment. This book offers an introduction to diagnostic assessors in psychology, education, and speech/language pathology to the basic ideas, principles, and practices of dynamic assessment. Most importantly, the book presents an array of specific procedures developed and used by the authors that can be applied to clients of all ages in both clinical and educational settings. The authors discuss their approach to report-writing, with a number of examples to demonstrate how they incorporate dynamic assessment into a comprehensive approach to assessment. The text concludes with a discussion of issues and questions that need to be considered and addressed. Two appendixes include descriptions of additional tests used by the authors that are adapted for dynamic assessment, as well as information about dynamic assessment procedures developed by others and sources for additional information about this approach.

Clinician's Guide To Neuropsychological Assessment Rodney D. Vanderploeg, 2014-04-04 Neuropsychological assessment is a difficult and

complicated process. Often, experienced clinicians as well as trainees and students gloss over fundamental problems or fail to consider potential sources of error. Since formal test data on the surface appear unambiguous and objective, they may fall into the habit of overemphasizing tests and their scores and underemphasizing all the factors that affect the validity, reliability, and interpretability of test data. But interpretation is far from straightforward, and a pragmatic application of assessment results requires attention to a multitude of issues. This long-awaited, updated, and greatly expanded second edition of the *Clinician's Guide to Neuropsychological Assessment*, like the first, focuses on the clinical practice of neuropsychology. Orienting readers to the entire multitude of issues, it guides them step by step through evaluation and helps them avoid common misconceptions, mistakes, and methodological pitfalls. It is divided into three sections: fundamental elements of the assessment process; special issues, settings, and populations; and new approaches and methodologies. The authors, all of whom are actively engaged in the clinical practice of neuropsychological assessment, as well as in teaching and research, do an outstanding job of integrating the academic and the practical. The *Clinician's Guide to Neuropsychological Assessment, Second Edition* will be welcomed as a text for graduate courses but also as an invaluable hands-on handbook for interns, postdoctoral fellows, and experienced neuropsychologists alike. No other book offers its combination of breadth across batteries and approaches, depth, and practicality.
