Death of the Planet of the Apes Andrew E. C. Gaska,2018-11-13 New adventures revealing secrets stemming from Beneath the Planet of the Apes In Beneath the Planet of the Apes, Col. George Taylor (played by Charlton Heston) disappears into the Forbidden Zone, only to return in the film's climactic scene. For forty-eight years, the question has remained--what happened to Taylor? Finally the truth is revealed. Beneath the irradiated wasteland, the astronaut faces the deadly wonders of a gleaming city and its inhuman citizenry. On the surface the gorillas--led by General Ursus--launch an all-out assault to exterminate the savage animals known as humans. And out in the desert, the chimpanzee scientist Milo strives to reconstruct the spacecraft that brought the humans from the past. Events spiral at a breakneck pace, with the fate of a world at stake.

Physical Anthropology Philip L. Stein,Bruce M. Rowe,1989 Since the first edition of Physical Anthropology, over a quarter century ago, Stein and Rowe have been helping to teach physical anthropology to tens of thousands of students. In this new edition, these award winning teachers and authors continue to share their love of discovery with students in this balanced, objective introduction to physical anthropology that does not assume that students have any previous knowledge of the subject. Carefully streamlined, making it more accessible and affordable, this seventh edition provides students with a pedagogical program designed to facilitate comprehension. Every concept is carefully explained and illustrated, guiding students step-by-step through difficult material. Despite changes in organization and length, this text maintains its emphasis on three important themes. First, that anthropology is a holistic discipline, second, that human beings are an integral part of nature, and third, because humans depend on learned behavior, our maintenance of a balance with nature can be strengthened by an understanding of our evolutionary past. As always, Stein and Rowe use the most current data to unravel the mystery of the evolution of humankind, and to examine the dynamic relationship between humans and their environment.

The Sense of Being Stared At Rupert Sheldrake,2013-06-22 Explores Rupert Sheldrake's more than 25 years of research into telepathy, staring and intention, precognition, and animal premonitions • Shows that unexplained human abilities--such as the sense of being stared at and phone telepathy--are not paranormal but normal, part of our biological nature • Draws on more than 5,000 case histories, 4,000 questionnaire responses, and the results of experiments carried out with more than 20,000 people • Reveals that our minds and intentions extend beyond our brains into the world around us and even into the future Nearly everyone has experienced the feeling of being watched or had their stare result in a glance in their direction. The phenomenon has been cited throughout history in nearly every culture, along with other commonplace "paranormal" occurrences such as premonitions and telepathy. In this newly updated edition, Sheldrake shares his more than 25 years of research into telepathy, the power of staring, remote viewing, precognition, and animal premonitions. Drawing on more than 5,000 case histories, 4,000 questionnaire responses, and the results of experiments on staring, thought transference, phone telepathy, and other phenomena carried out with more than 20,000 people as well as reports and data from dozens of independent research teams, Sheldrake shows that these unexplained human abilities--such as the sense of being stared at--are not paranormal but normal, part of our biological nature. He reveals that telepathy depends on social bonds and traces its evolution from the connections between members of animal groups such as flocks, schools, and packs. Sheldrake shows that our minds and intentions extend beyond our brains into our surroundings with invisible connections that link us to each other, to the world around us, and even to the future.

The Experience of Science I.F. Goldstein,M. Goldstein,1984-04-30 Our earlier book, How We Know: An Exploration of the Scientific Process, was written to give some conception of what the scientific approach is like, how to recognize it, how to distinguish it from other approaches to understanding the world, and to give some feeling for the intellectual excitement and aesthetic satisfactions of science. These goals represented our concept of the term scientific literacy. Though the book was written for the general reader, to our surprise and gratification it was also used as a text in about forty colleges, and some high schools, for courses in science for the non-scientist, in methodology of science for social and behavioral sciences, and in the philosophy of science. As a result we were encouraged to write a textbook with essentially the same purpose and basic approach, but at a level appropriate to college students. We have drawn up problems for those chapters that would benefit from them, described laboratory experiments that illustrate important points discussed in the text, and made suggestions for additional readings, term papers, and other projects. Throughout the book we have introduced a number of chapters and appendices that provide examples of the uses of quantitative thinking in the sciences: logic, mathematics, probability, statistics, and graphical representation.

Christianity and Earthkeeping Ernst Marais Conradie,2011-04-01 Why should Christians engage in earthkeeping as Christians and from within Christian communities? What is the underlying theological rationale for that? In this book some 19 reasons why Christians may be encouraged to engage in earthkeeping are identified, juxtaposed and assessed in order to call for clarity, to invite discussion and to elicit creative tensions. No single position is advocated ? it would be helpful if Christians could engage in earthkeeping on the basis of any of these motivations.

A Theory of Communication and Justice Klaus Bruhn Jensen, 2020-12-29 This book outlines a theory of communication and justice for the digital age, updating classic positions in political philosophy and ethics, and engaging thinkers from Aristotle through Immanuel Kant and the American pragmatists to John Rawls, Jürgen Habermas, and Amartya Sen. In communication seeking to define justice and call out injustice, there is such a thing as the last word. The chapters in this book trace the historical emergence of communication as a human right; specify the technological resources and institutional frameworks necessary for exercising that right; and address some of the challenges following from digitalization that currently confront citizens, national regulators, and international agencies. Among the issues covered are public access to information archives past and present; local and global networks of communication as sources of personal identities and imagined communities; the ongoing reconfiguration of the press as a fourth branch of governance; and privacy as a precondition for individuals and collectives to live their lives according to plans, and to make their own histories. The book will be of interest to students and researchers in media and communication studies, cultural studies, political philosophy and ethics, and interdisciplinary fields examining the ethical and political implications of new information and communication infrastructures.
