More Harm than Good? Edzard Ernst, Kevin Smith, 2018-01-11 This book reveals the numerous ways in which moral, ethical and legal principles are being violated by those who provide, recommend or sell 'complementary and alternative medicine' (CAM). The book analyses both academic literature and internet sources that promote CAM. Additionally the book presents a number of brief scenarios, both hypothetical and real-life, about individuals who use CAM or who fall prey to ethically dubious CAM practitioners. The events and conundrums described in these scenarios could happen to almost anyone. Professor emeritus of complementary medicine Edzard Ernst together with bioethicist Kevin Smith provide a thorough and authoritative ethical analysis of a range of CAM modalities, including acupuncture, chiropractic, herbalism, and homeopathy. This book could and should interest all medical professionals who have contact to complementary medicine and will be an invaluable reference for patients deliberating which course of treatment to adopt.

Traditional and Complementary Medicines: Are they Ethical for Humans, Animals and the Environment? Kate Chatfield, 2018-11-27 This book provides a systematic analysis of the ethical implications of traditional and complementary medicine (T&CM), focusing on pragmatic solutions. The author uses a bioethical methodology called the "Ethical Matrix," to consider the impact of T&CM use for animals and the environment as well as for humans. A systematic search of the literature reveals that most published ethical concerns are related to the safety of T&CM use for humans. However, application of the Ethical Matrix demonstrates that the ethical implications for T&CM use are much broader. In this book, the author analyses the most serious implications, including adverse events related to homeopathy, the use of animals in T&CM products, and the impact of herbal medicine on the environment. Comparisons with the ethical implications of conventional biomedicine help readers to contextualise debate, and highlight aspects that may be unique to T&CM. Globally, many high-level health policy makers promote T&CM as an accessible and affordable healthcare option. However, their use is considered by some to be a waste of resources, unscientific, and unethical. Offering a frank analysis of this largely ignored field of healthcare ethics, this book is both timely and essential. It helps patients, policy makers, practitioners, researchers, and students gain the knowledge they need to make more informed decisions.

Non-Pharmacological Interventions Gregory Ninot, 2020-11-27 Non-pharmacological interventions (NPIs) have become essential solutions for better living, preventing disease, and self-care, in addition to biomedical treatments, and for increasing longevity without loss of quality of life. Over the past 20 years, these practices have gone from general diet and hygiene advice to targeted and personalized solutions for prevention, care optimization, and curative treatments. Selected empirically for centuries or recently with the help of technological innovations and epigenetic, interventional, and medico-economic studies, their development is growing and diversifying around the world. Today an NPI ecosystem is made up of a myriad of public and private actors. As interest in NPIs grows, so do questions about safety, effectiveness, standardization, ethical practice, and surveillance. In this book, the author answers these questions with a scientific approach, because evidence-based science, evidence-based practice, clinical research, and data monitoring have revolutionized this field. Topics explored among the chapters include: · Defining Non-Pharmacological Interventions · The Benefits and Dangers of Non-Pharmacological Interventions · Motives and Facilitators of Non-Pharmacological Intervention Use · The Market for Non-Pharmacological Interventions · Evaluation of Non-Pharmacological Interventions · The Future of Non-Pharmacological Interventions Non-Pharmacological Interventions: An Essential Answer to Current Demographic, Health, and Environmental Transitions is a must-have resource for clinicians and other health professionals, researchers, students, health insurers, policy-makers, caregivers, and entrepreneurs in the health and wellness space, as well as any users who wish to inform themselves about NPIs.

Alternative Medicine Edzard Ernst, 2019-06-29 Alternative medicine (AM) is hugely popular; about 40% of the US general population have used at least one type of alternative treatment in the past year, and in Germany this figure is around 70%. The money spent on AM is considerable: the global market is expected to reach nearly US \$ 200 billion by 2025, with most of these funds coming directly out of consumers' pockets. The reasons for this popularity are complex, but misinformation is certainly a prominent factor. The media seem to have an insatiable appetite for the subject and often report uncritically on it. Misinformation about AM on the Internet (currently about 50 million websites are focused on AM) is much more the rule than the exception. Consumers are thus being bombarded with misinformation on AM, and they are ill-protected from such misinformation and therefore prone to making wrong, unwise or dangerous therapeutic decisions, endangering their health and wasting their money. This book is a reference text aimed at guiding consumers through the maze of AM. The concept of the book is straightforward. It has two main parts. The first, short section provides essential background on AM, explaining in simple terms what is (and what is not) good, reliable evidence, and addressing other relevant issues like, for instance, the placebo response, informed consent, integrative medicine, etc. The second and main part consists of 150 short chapters, topically grouped and each dedicated to one single alternative therapeutic or diagnostic method. In each of them, seven critical points are raised. These points relate to issues that are important for consumers' decisions whether it is worth trying the method in question. Restricting the discussion to just seven points means that issues must be prioritized to those themes which are most relevant in the context of each given modality.

Alternative Medicine Edzard Ernst, 2022-11-24 Alternative medicine (AM) is popular; about 40% of the US general population have used alternative treatment in the past year, and in Germany this figure is around 70%. Consumers are bombarded with misleading and false information on AM and therefore prone to making wrong, unwise, or dangerous therapeutic decisions, endangering their health and wasting their money. This book is a reference text aimed at guiding consumers through the maze of AM. This second edition includes over 50 additional treatments as well as updates on many others.

The Morality Maze Neil M. Daniels, 1991 People still believe that any behavior is permitted so long as they can get away with it. This attitude makes our current moral situation both confusing and discouraging. In addition, society has lost confidence in traditional methods of strengthening morality, be it the family, the schools, religion, or the law. Our failure to create a peaceful, moral world is all the more disturbing when compared to the tremendous strides we have made in science and its application to business and industry, medicine, communications, transportation, and agriculture. In *The Morality Maze*, Neil M. Daniels expands the concept of morality by assigning it a scientific base in biology. In the past, each individual immoral behavior was described and defined, but we failed to discern what they have in common, other than being forbidden. Daniels reveals one simple moral factor that pervades all moral and immoral behavior. This common denominator is a bioenvironmental fact of human ecology. The human ecosystem artifact common to all forms of morality is property, an innovative component of moral ecology theory that has revolutionary implications for moral philosophy, law, education, and daily life.

Albion's Seed David Hackett Fischer, 1991-03-14 This fascinating book is the first volume in a projected cultural history of the United States, from the earliest English settlements to our own time. It is a history of American folkways as they have changed through time, and it argues a thesis about the importance for the United States of having been British in its cultural origins. While most people in the United States today have no British ancestors, they have assimilated regional cultures which were created by British colonists, even while preserving ethnic identities at the same time. In this sense, nearly all Americans are *Albion's Seed*, no matter what their ethnicity may be. The concluding section of this remarkable book explores the ways that regional cultures have continued to dominate national politics from 1789 to 1988, and still help to shape attitudes toward education, government, gender, and violence, on which differences between American regions are greater than between European nations.

Complementary Medicine Edzard Ernst, 1996 *Complementary Medicine*: an objective appraisal consists of ten contributions by experts from various countries, each of whom looks critically and constructively at a fundamental aspect of the subject. This book is not specific to a particular country, nor is it confined to specific therapies. It is not written solely by doctors or by lay practitioners. It does, however, provide balanced and informed views on fundamental, general issues within complementary medicine and is aimed at all professionals who are seriously interested in the subject.

The Criminalization of European Cartel Enforcement Peter Whelan, 2014 The challenges facing the criminalisation of cartel activity in the European Union are threefold: theoretical, legal, and practical. This book analyses these crucial challenges so that the complexity of the process of European antitrust criminalisation can be accurately understood.

The City in Literature Richard Lehan, 2023-09-01 This sweeping literary encounter with the Western idea of the city moves from the early novel in England to the apocalyptic cityscapes of Thomas Pynchon. Along the way, Richard Lehan gathers a rich entourage that includes Daniel Defoe, Charles Dickens, Emile Zola, Bram Stoker, Rider Haggard, Joseph Conrad, James Joyce, Theodore Dreiser, F. Scott Fitzgerald, and Raymond Chandler. The European city is read against the decline of feudalism and the rise of empire and totalitarianism; the American city against the phenomenon of the wilderness, the frontier, and the rise of the megalopolis and the decentered, discontinuous city that followed. Throughout this book, Lehan pursues a dialectic of order and disorder, of cities seeking to impose their presence on the surrounding chaos. Rooted in Enlightenment yearnings for reason, his journey goes from east to west, from Europe to America. In the United States, the movement is also westward and terminates in Los Angeles, a kind of land's end of the imagination, in Lehan's words. He charts a narrative continuum full of constructs that represent a cycle of hope and despair, of historical optimism and pessimism. Lehan presents sharply etched portrayals of the correlation between rationalism and capitalism; of the rise of the city, the decline of the landed estate, and the formation of the gothic; and of the emergence of the city and the appearance of other genres such as detective narrative and fantasy literature. He also mines disciplines such as urban studies, architecture, economics, and philosophy, uncovering material that makes his study a lively read not only for those interested in literature, but for anyone intrigued by the meanings and mysteries of urban life.

Democracy and Education John Dewey, 1916 John Dewey's *Democracy and Education* addresses the challenge of providing quality public education in a democratic society. In this classic work Dewey calls for the complete renewal of public education, arguing for the fusion of vocational and

contemplative studies in education and for the necessity of universal education for the advancement of self and society. First published in 1916, Democracy and Education is regarded as the seminal work on public education by one of the most important scholars of the century.

Orson Welles Randy Rasmussen,2006-07-05 Orson Welles, a self-conscious storyteller who often invited his audience to question the methods and veracity of what they see and hear. He was that rare magician who both pulled the wool over our eyes, for our delight, and unravelled the wool before our eyes, encouraging us to ponder the nature of the magic itself. Many of the characters in Welles's movies can also be seen as magicians of a sort, creating impressions intended to manipulate other characters, or even themselves, in one direction or another. But unlike Welles, few of them voluntarily expose their tricks to the scrutiny of their victims. Six major Welles films--Citizen Kane, The Magnificent Ambersons, The Lady from Shanghai, Touch of Evil, The Trial, and Chimes at Midnight--receive a scene by scene analysis in this critical study. From a viewer's perspective it illuminates the dramatic rhythms of each film as they unfold on screen and from the soundtrack. Frequent analogies to other movies and pertinent quotations from the impressions of other commentators broaden the text, but always within the scene by scene progression dictated by the film under discussion.

Dark Ecology Timothy Morton,2016-04-12 Timothy Morton argues that ecological awareness in the present Anthropocene era takes the form of a strange loop or Möbius strip, twisted to have only one side. Deckard travels this oedipal path in Blade Runner (1982) when he learns that he might be the enemy he has been ordered to pursue. Ecological awareness takes this shape because ecological phenomena have a loop form that is also fundamental to the structure of how things are. The logistics of agricultural society resulted in global warming and hardwired dangerous ideas about life-forms into the human mind. Dark ecology puts us in an uncanny position of radical self-knowledge, illuminating our place in the biosphere and our belonging to a species in a sense that is far less obvious than we like to think. Morton explores the logical foundations of the ecological crisis, which is suffused with the melancholy and negativity of coexistence yet evolving, as we explore its loop form, into something playful, anarchic, and comedic. His work is a skilled fusion of humanities and scientific scholarship, incorporating the theories and findings of philosophy, anthropology, literature, ecology, biology, and physics. Morton hopes to reestablish our ties to nonhuman beings and to help us rediscover the playfulness and joy that can brighten the dark, strange loop we traverse.
